

YokeMate® LWS

A SYSTEM DESIGNED FOR YOUR HOSPITAL

LEAD WIRES AREN'T STANDARDIZED...
UNLESS THEY'RE ATTACHED
TO YOKEMATE® LWS

YOKEMATE® LWS IS AN ALL-IN-ONE SYSTEM

The challenge is the same whether you rely on one or multiple monitor vendors. There are many different products, even from the same manufacturer, that require different lead wires.

Unfortunately, that approach doesn't provide you much flexibility. It just allows vendors to make more money from equipment sales that lock your hospital into a system exclusive to them... and restricts you.

the flexible solution your hospital needs

CHANGING LEAD WIRES IS AS EASY AS "PLUG AND GO" WITH YOKEMATE® LWS

Performing a simple hospital or surgery center conversion that maximizes lead wire flexibility is not only possible, it's surprisingly affordable. All you need is YokeMate® LWS!

AS EASY AS 1-2-3

1. Start with the original patient cable
2. Insert a YokeMate® Adapter or plug in a Universal Cable
3. Plug in AMC&E din-style lead wires

How YokeMate® LWS Works

YokeMate® LWS assembles in a snap. It's so smart, it actually recognizes - and **standardizes** - every kind of lead: shielded, unshielded, disposable, reusable, and radiolucent. The best part is **NO** technical experience or training is required to use it.

YOKEMATE® ADAPTERS

Used to standardize spacing and lead sequence across multiple monitoring systems. Available for Philips, G.E., Spacelabs, Datascope, Siemens / Dräger, and Nihon Koden

UNIVERSAL CABLES

An alternative to YokeMate® Adapters. Replaces the original manufacturer's patient cable. Used when a YokeMate® Adapter is not available, or when a hospital is opposed to adapters.

LEAD WIRE COMBINERS

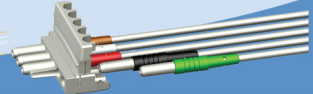

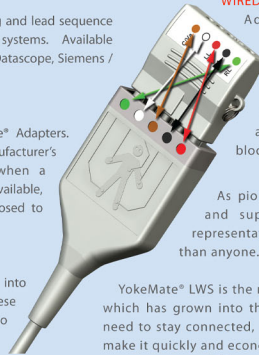

Din-style lead wires plug into AMC&E's combiner. These leads plug directly into YokeMate® Adapters, Universal Cables, and Philips IntelliVue®!

WIRED FOR PATIENT MONITORING

Advantage Medical Cables and Electronics, Inc. specializes in manufacturing innovative and intuitive patient monitoring accessories, cable interconnect systems, lead wires, SpO2 sensors and cables, reusable and disposable blood pressure cuffs, and IBP cables.

As pioneers in patient monitoring cables and supplies, our principles and sales representatives understand your needs better than anyone.

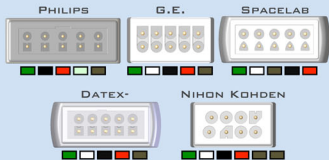

YokeMate® LWS is the newest addition to our product line, which has grown into the thousands. Whatever cable you need to stay connected, AMC&E either has it or can custom-make it quickly and economically.

SOMETHING IS SUB-STANDARD ABOUT CURRENT STANDARD OF CARE PROCEDURES

All other parameters such as SpO2, NIBP, IBP, and Temperature offer both reusable and disposable options with a multitude of product shapes and sizes to fit your clinical needs. What's missing? Your ECG cable connections haven't been standardized for lead wire conversion and interchangeability. YokeMate® LWS solves this problem.

CURRENTLY THERE IS **NO**
STANDARDIZATION

Most manufacturer's offer leads that only fit their monitors. Even the same manufacturer's leads may not fit between hardwired and telemetry, or between new and older generation devices.

Do you ever feel like you're doing the "Leado Shuffle?" Insert one type of lead wires for low acuity areas... shuffle to another type for high acuity areas... shuffle to what the manufacturer's restrictions limit you to rather than what you prefer to use. Those days are history!

Introducing **YokeMate® LWS** - a patent pending universal lead wire system from Advantage Medical Cables and Electronics, Inc. that standardizes lead wires hospital wide - regardless of what equipment you currently operate.

- ✓ Standardize leads throughout the whole hospital
- ✓ Increase infection prevention benefits with disposables
- ✓ Improve hospital efficiency
