# Company Profile

## Company Introduction - Firma Hakkında

With its extensive experience and customer-oriented service policy, METALICO METAL is proud to be one of the leading manufacturers of cable management solutions in Turkey.

In its 8.000 m<sup>2</sup> fully automated facility METALICO METAL have all the resources to guarantee the highest efficiency and speed of delivery. Continuously growth and non stop investment in productive equipments allow METALICO METAL, to offer high quality and competitive range of cable trays that contributes to the customer satisfaction.

As specialised in Cable Management Systems, METALICO METAL is continuously growing by extending its range of products by adding Electrical Equipments & Lighting and Earthing Materials.

METALICO METAL performs its activities in accordance with ISO 9001 and IEC 61537 Quality Standards.

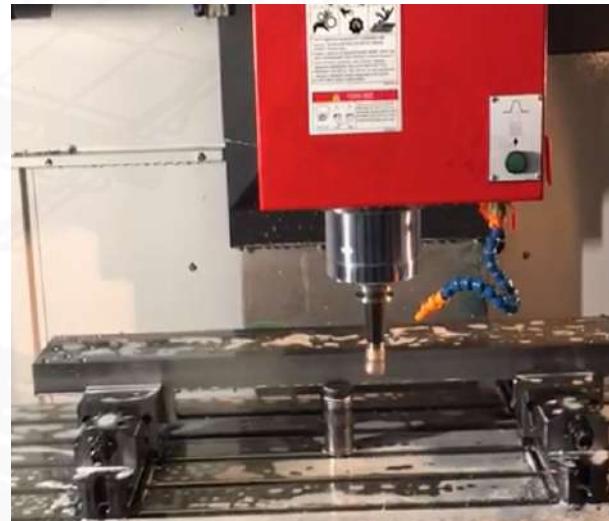

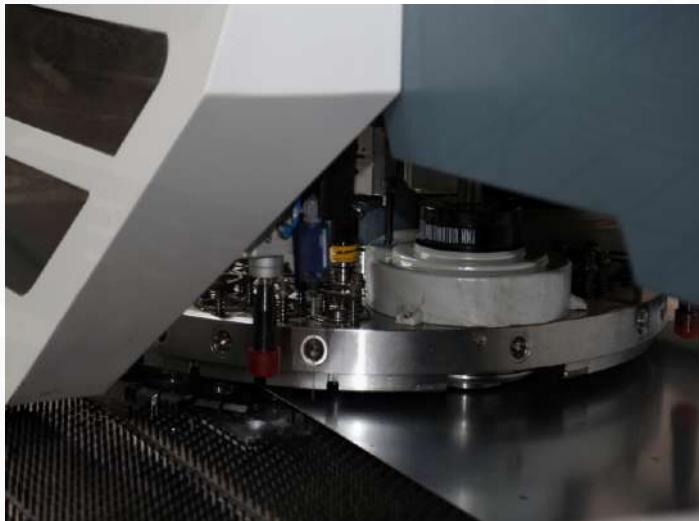

Our quality policy is to offer quality items and services that would meet requirements of our customers for competitive prices, to make timely deliveries and to ensure continuance of service and quality. Our target is constantly producing high quality items. Our basic target is to be a world brand at our field of operation.

With a total quality management approach, METALICO METAL have gained reliable business partners in many countries around the world. Expanding day by day through a network of sales, we are proud to export %80 of our production to more than 60 countries.

We are grateful for trust you place in our products and in our company.

## Company Introduction - Firma Hakkında

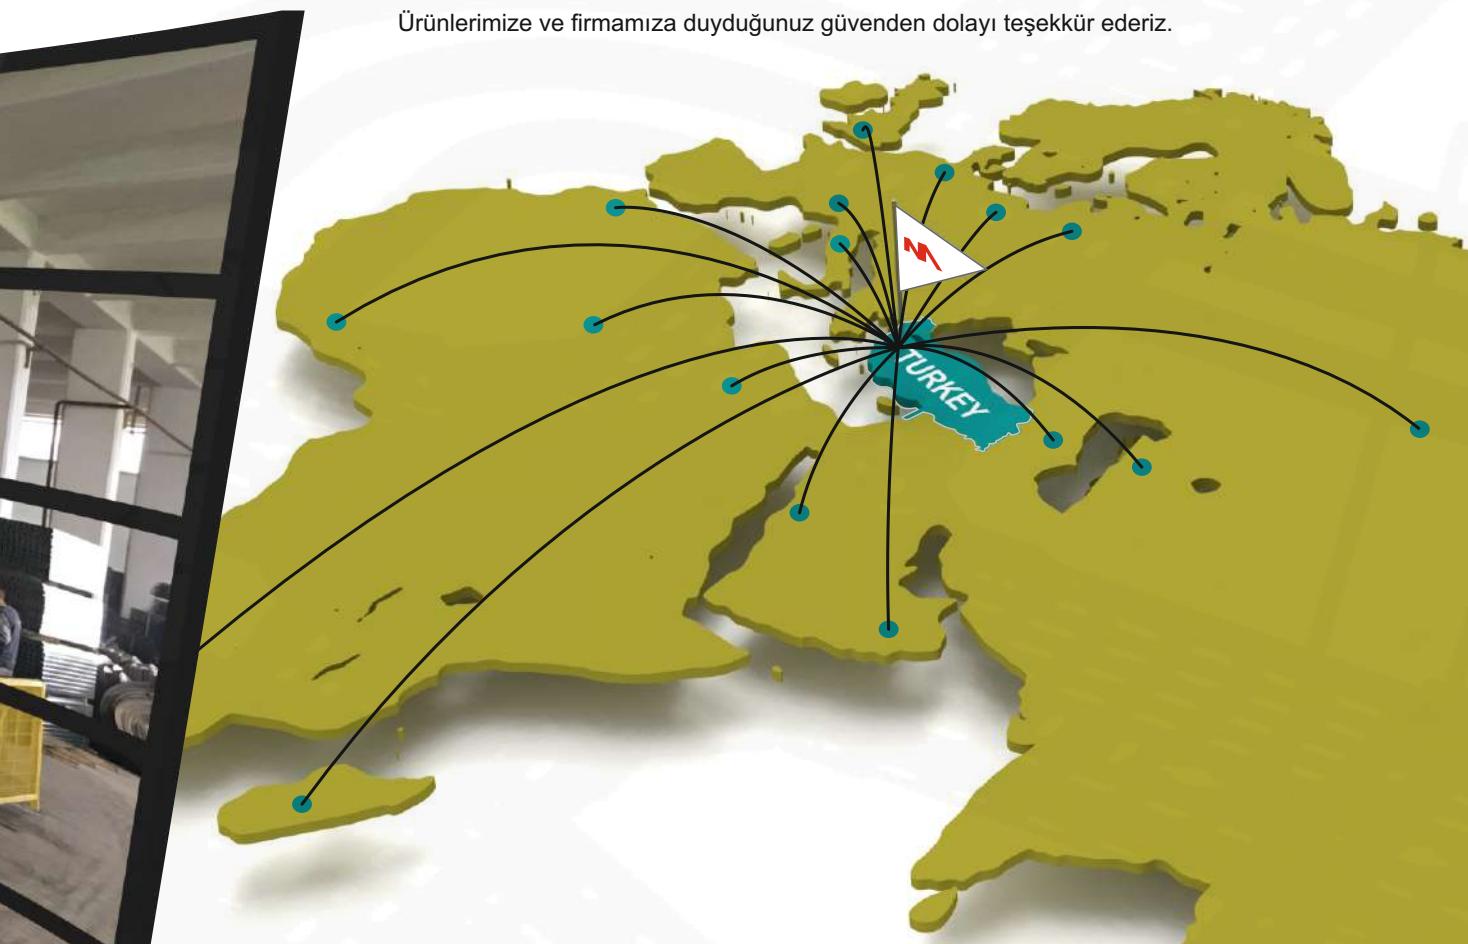

METALICO METAL; yıllara uzanan deneyimi ve müşteri odaklı hizmet politikasıyla, Selimpaşa fabrikasında toplam 8.000 m<sup>2</sup> kapalı alanda gerçekleştirdiği otomasyona dayalı üretimiyle; Türkiye'nin önde gelen kablo kanalı üreticileri arasında yer almaktadır.

Kurulduğu ilk günden bu yana hızla büyüyen METALICO METAL, üretimini ve faaliyet alanlarını sürekli genişletmektedir. Ana konusu kablo koruma ve taşıma sistemleri olan METALICO METAL, bünyesine topraklama ve yıldırımdan koruma ekipmanları gibi diğer elektrik malzemelerini de katarak büyümeye devam etmektedir.

METALICO METAL, üretim faaliyetlerini ISO 9001 ve TSE EN 61537 standartlarına uygun şekilde sürdürmektedir. Kalite politikası, müşterilerinin isteklerini karşılayacak kaliteli ürün ve hizmetleri en ekonomik şekilde sunmak, zamanında teslim etmek, hizmetin ve kalitenin sürekliliğini sağlamaktır. Amacı kaliteli ve iyi malzemeyi sürekli olarak üretmek olan METALICO METAL'in temel hedefi, konusunda bir dünya markası olmaktır.

Benimsediği toplam kalite yönetimi anlayışı sayesinde dünyanın birçok ülkesinde güvenilir iş ortakları kazanmıştır. Hergenç gün genişleyen satışlarıyla üretiminin %80 ini 60'tan fazla ülkeye ihraç etmenin haklı gururunu yaşamaktadır.

Ürünlerimize ve firmamızda duyduğunuz güvenden dolayı teşekkür ederiz.

## Ürün Açıklamaları

Cable Tray systems provide rigid structural support for cables in a variety of commercial and industrial applications. The basic styles of cable tray are: Perforated and Solid Cable Tray, Cable Ladder and Wire Mesh Cable Tray (Basket type).

*Kablo kanalı, yapıların enerji dağıtımını veya haberleşme için kullanılan tesisatlarında, izole elektrik kablolarının güvenli bir şekilde taşınması, sabitlenmesi ve desteklenmesini sağlayan birbirile uyumlu birimlerden oluşan sistemlerdir. Kablo kanalı sistemleri genellikle ticari ve endüstriyel yapılarda kablo yönetimi için kullanılan sistemler olup kullanım yerine göre farklı tipleri mevcuttur. Ana olarak: Delikli ve deliksiz kablo kanalı, kablo merdiveni ve tel kablo kanalı olarak sınıflandırabiliriz.*

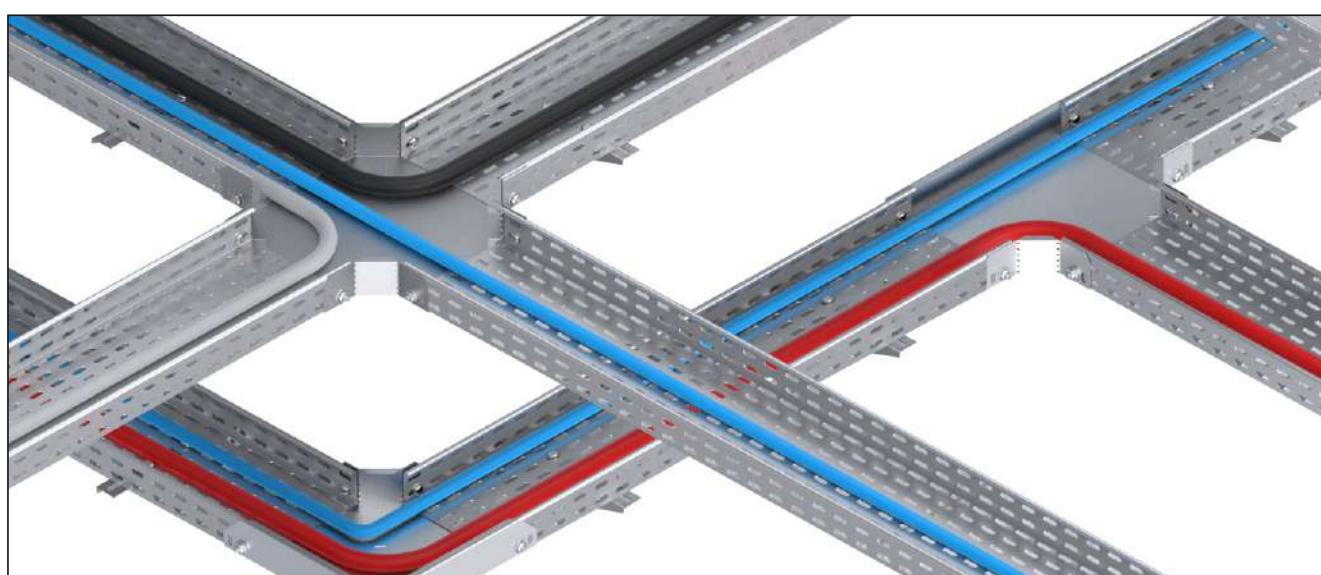

### Perforated and Solid Cable Tray - Delikli ve Deliksiz Kablo Kanalı

Perforated and Solid Cable Tray is a one piece support with either ventilated (perforated) or solid bottom (non perforated) sections. These sections are used with a single power cable, multiple control, or signal circuit cables.

#### Features & Benefits:

- \* Designed to support cabling in 3.0m spans or less. Two flange designs to provide added overall strength to tray
- \* Perforated bottom design allows for hold down attachment, cable attachment, and heat dissipation
- \* Continuous solid bottom tray allows for constant cable support
- \* Available from 0,6mm upto 2,0mm thickness
- \* Available in Pregalvanised, Hot Dip Galvanized or Stainless Steel
- \* Side Height options: 25, 30, 35, 40, 50, 60, 70, 75, 80, 100, 110, 125, 150mm
- \* Widths from 50mm to 1000mm
- \* Bend radius options: 50mm, 150mm, 300mm, 600mm
- \* Length options: 2000mm, 2500mm, 3000mm
- \* Covers available for added cable protection from environmental factors
- \* Available in various mounting methods – c-hanger, trapeze mount, or wall mount

*Delikli tip kablo kanaları taban ve yanlarındaki delikleri sayesinde taşıdığı kablolar için bir miktar havalandırma olmasını sağlar. Bu yüzden, daha çok tesisatta ısının oluştuğu fakat ıslakların ortalamayı geçmediği alanlarda tercih edilir. Çok uzun destek aralığı gerektirmeyen tesisatlarda kullanımı uygundur. Deliksiz tip kablo kanalları tamamen kaplı olup haberleşme ve bilgisayar kabloları gibi kabloların korunmasının önemli olduğu ve ısınmanın problem oluşturmadığı durumlarda tercih edilir.*

## Ürün Açıklamaları

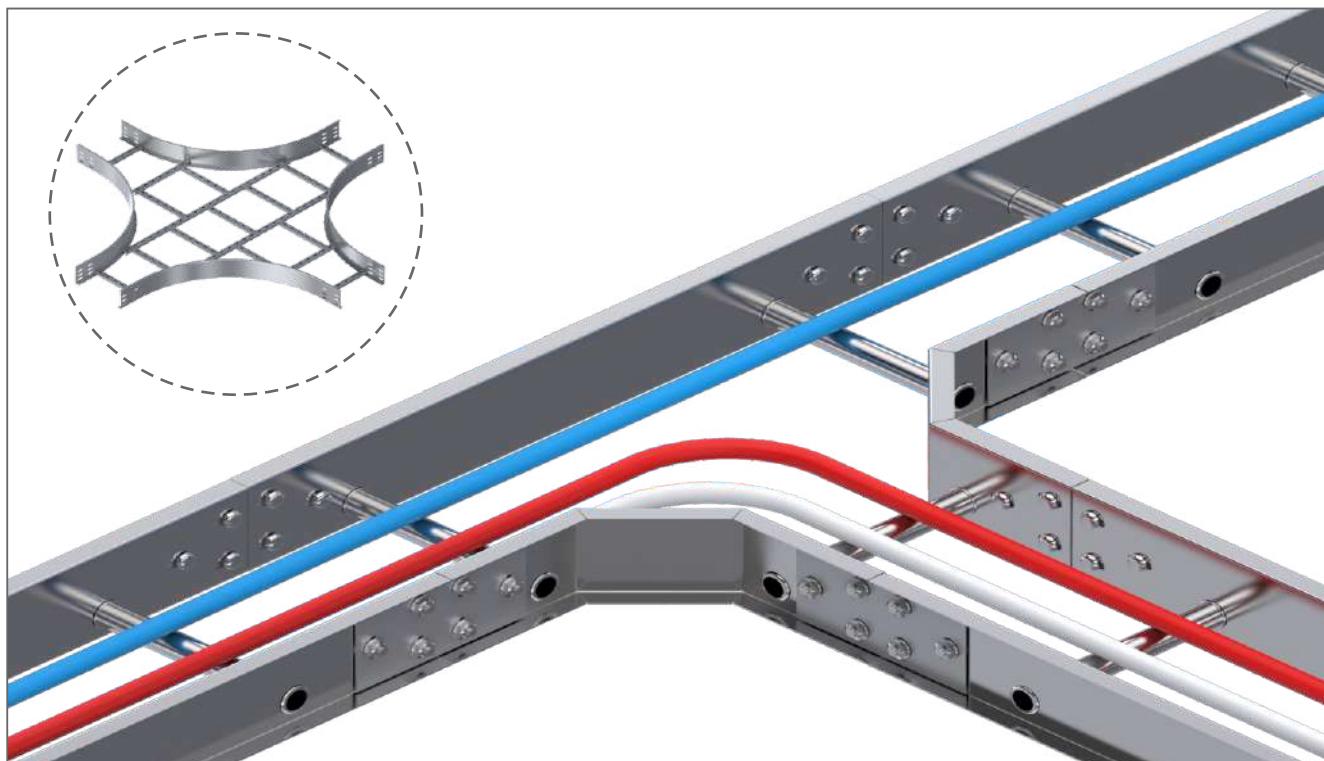

### Cable Ladders - Kablo Merdivenleri

Ladder consists of two longitudinal side members (side beams) connected by individual traverse (rungs) members. It is intended for use as a power cable or control cable support.

#### Features & Benefits:

- \*Designed to reduce overall weight in weight sensitive environments while increasing strength. Ideal for offshore and modular applications where weight is a challenge.
- \*Lightweight – design optimized to exceed load requirements while keeping weight to a minimum
- \*I-Beam side rail - maximizes strength – reduces weight
- \*Slotted side rails reduce labor when splicing after cutting
- \*Slotted rungs for cable and accessory attachment
- \*Available from 1,2mm upto 2,5mm thickness
- \*Available in Pregalvanised, Hot Dip Galvanized or Stainless Steel
- \*Side Height options: 50, 60, 70, 75, 80, 100, 110, 125, 150, 200mm
- \*Widths from 100mm to 1500mm
- \*Bend radius options: 125mm, 150mm, 300mm, 450mm, 600mm
- \*Length options: 2000mm, 2500mm, 3000mm
- \*Covers available for added cable protection from environmental factors
- \*Available in various mounting methods – c-hanger, trapeze mount, or wall mount

*Merdiven tipi kablo kanalları, üzerinde merdiven basamağını andıran düzenli aralıklarla kaynatılmış barlar sebebiyle bu şekilde adlandırılırlar. Basamak aralarında havalandırmanın yükselliği nedeniyle tesisatta ısının olduğu ve yüksek seviyelere erişebildiği alanlarda kullanımı yaygındır. Daha uzun destek aralıklarında da yeterli taşıma kapasitesi sağlar ancak basamak aralıkları, kiriş formu ve et kalınlıklarının doğru bir şekilde hesaplanmış olması gereklidir.*

# Product Description

## Ürün Açıklamaları

### Wire mesh cable trays - Tel Kablo Kanalları

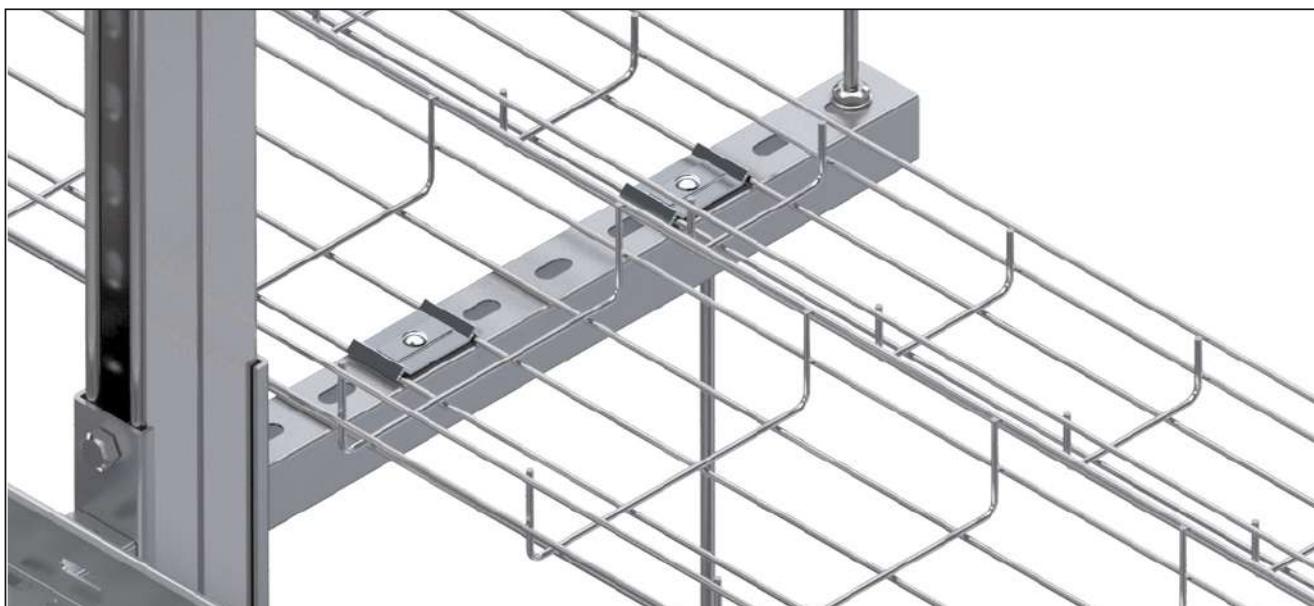

METALICO wire mesh cable trays produced from high mechanical strength steel wire that is welded into a 50 x 100 mesh system. This mesh is then formed into channel, and finishing after fabrication. The 50 x 100 mesh permits continuous airflow to help prevent heat buildup. This unique open design also prevents the buildup of dust, contaminants and bacterial proliferation. Primarily used for support of low voltage, telecommunication and fiber optic cables.

#### Features & Benefits:

METALICO wire mesh cable tray systems offers a number of advantages over traditional type cable trays apart from an economical point including:

- \*Fast and simple on-site assembly
- \*Light weight yet strong and effective- can be handled by one person
- \*Simple fixing systems
- \*Cable save- flush smooth surface and edges
- \*Adaptable- cables can be exit tray at any point
- \*Easy to create tees, crosses, reducers, risers and bends on site
- \*Open trays allow air circulating to keep wiring cool and makes for easy identification of cable
- \*Available in 4mm upto 6mm wire thickness
- \*Available in Electrogalvanised, Hot Dip Galvanized or Stainless Steel
- \*Side Height options: 35, 60, 85, 110, 160mm
- \*Widths from 50mm upto 1000mm
- \*Length options: 2500mm, 3000mm
- \*Covers available for added cable protection from environmental factors
- \*Available in various mounting methods – c-hanger, trapeze mount, or wall mount

*Tel tipi kablo kanalları kısa destek aralarının bulunduğu bina içlerinde ve alçak gerilim, haberleşme ve fiber optik kabloları gibi hafif ama çok sayıda kablonun bulunduğu tesisatlarda yaygın olarak kullanılır. Tozlanmanın problem oluşturacağı ve hijyenin önemli olduğu yapılarda genellikle tercih edilen ürünlerdir.*

# Product Description

## Ürün Açıklamaları

All METALICO cable tray systems are manufactured to meet the requirements of Turkish and European standards EN 61537 – cable trays & ladder systems for electrical installations.

**WARNING!**—Do not use a cable tray as a walkway, ladder or support for people; cable tray is a mechanical support system for cables and raceways. Using cable trays as walkways can cause personal injury and also damage cable tray and installed cables.

Hazardous voltages in electrical equipment can cause severe personal injury or death. Safety related work practices should be followed at all times. The performance of a cable tray wiring system is dependent on its proper installation, including supports and cables. Neglecting installation and maintenance guidelines may lead to personal injury as well as damage to property.

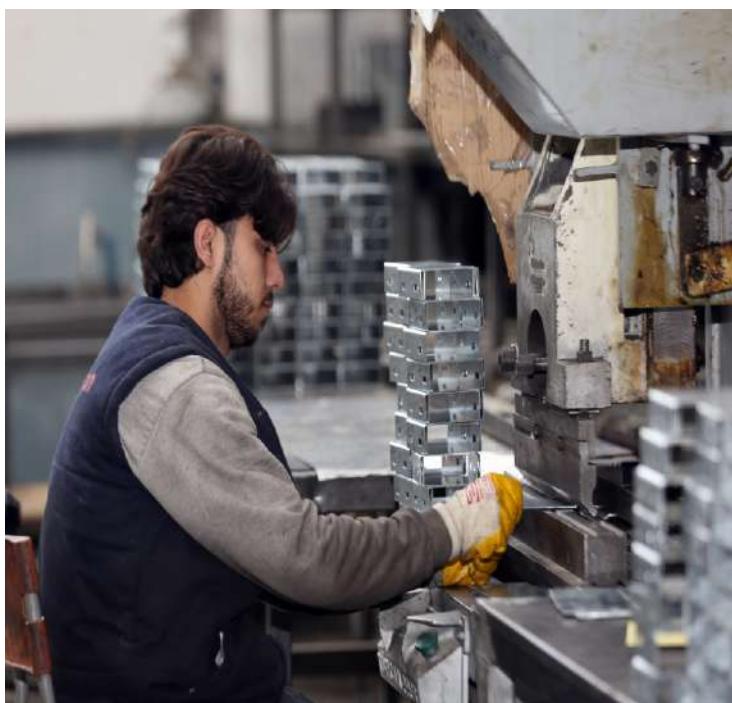

Installation and maintenance of cable tray wiring systems shall be conducted only by qualified personnel. Manufacturer reserves the right to change specifications and design data in the catalog as product development. Published information is the study and may be changed without prior notice.

*Kablo kanal sisteminin genel tasarımı ve üretimi EN 61537 standartları ile uyumlu olarak yapılmaktadır. Montaj seçenekleri sadece bu yazında belirtilen uygulamalarla sınırlı değildir.*

**UYARI :** *Kablo kanallarını insanlar için yürüme, merdiven ya da bir destek olarak kullanmayın. Kablo kanalı, kablolar için mekanik destek olarak kullanılır. Kablo kanalları merdiven veya yürüyüş yolları gibi kullanılırsa kişisel yaralanmalara neden olabilir ve ayrıca kablo kanalının kendisine ve yüklü olan kablolara hasar da verebilir. Kablo kanalın performansı, düzgün kurulumuna bağlıdır. Kablo kanalın montajı ve sonraki bakımı sadece yetkili ve yeterli eğitim görmüş personel tarafından yapılmalıdır.*

*Güvenlik kurallarına uygun olarak bu kişilerin montaj ve bakımı sırasında: lastik eldiven, kasket, toz maskesi vb. gerekli ekipmanları bulunmalıdır.*

*Bu katalogta yer alan bütün bilgiler METALICO METAL firmasına aittir ve izinsiz olarak kullanılamaz. METALICO METAL bu katalogta belirtilen bütün bilgileri habersiz olarak değiştirme hakkına sahiptir. Katalogta yapılmış hatalar için firmamız yasal olarak sorumlu tutulamaz.*

## Malzeme Seçimi

The life expectancy of a cable support system is dependent on the environment in which it is placed. Therefore, it is important to establish the corrosive properties of an environment to ensure that the right treatment and the right material are chosen.

All metal surfaces are affected by corrosion. Depending on the physical properties of the metal and the environment to which it is exposed, chemical or Electromechanical corrosion may occur.

### Atmospheric Corrosion:

Atmospheric corrosion occurs when metal is exposed to airborne liquids, solid or gases. Some sources of atmospheric corrosion are moisture, salt, dirt and sulphuric acid. This form of corrosion is typically worse outdoors, especially near marine environments.

### Chemical Corrosion:

Chemical corrosion takes place when metal comes in direct contact with corrosive media. Some factors which affect the severity of chemical corrosion include: chemical concentration level, duration of contact, frequency of washing and operating temperature.

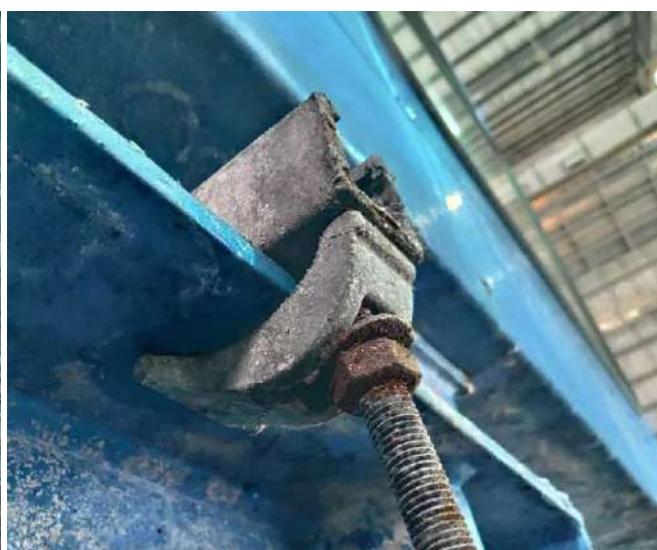

### Electrochemical corrosion:

When two dissimilar metals are in contact and become damp it is possible for corrosion to be induced in one of the metals. Such corrosion may progress rapidly and cause considerable damage so it is important to consider and, if necessary, take steps to eliminate this process.

### Galvanic corrosion:

Galvanic Corrosion occurs when two or more dissimilar metals are in contact in the presence of an electrolyte (ie. Moisture). An electrolyte cell is created and the metals form an anode or a cathode depending on their relative position on the Galvanic Series Table. The anodic material will be the one to corrode. Whether a material is anodic depends on the relative position of the material. For example: If zinc and steel are in contact, the zinc acts as the anode and will corrode; the steel acts as the cathode, and will be protected. If steel and copper are in contact, the steel is now the anode and will corrode.

## Malzeme Seçimi

The table below shows various corrosion classes. As a guide, we have included the surface treatment recommended by Metalico for the different classes. On the next pages, we briefly outline the various surface treatments and materials.

As regards environmental corrosion, a steel design component can usually be assigned to one of the corrosion classes (C1-C5-M) as shown in table below.

In this table you can see also the average level of corrosion in zinc. The corrosion classes comply with those stipulated in EN ISO 12944-2.

Corrosion Class	Environmental Corrosion	Mass loss of zinc per 1 year of exposure ( $\mu\text{m}$ )	Typical Environment		Recommended min. Surface treatment
			Outdoors	Indoors	
C1	Very low	$\leq 0.1$	-	Heated Buildings, like offices, shops, schools and hotels.	Electro-galvanised or Pre-galvanised according with EN 10142
C2	Low	>0.1 to 0.7	Atmospheres with low levels of airborne pollution Rural areas.	Non-heated areas with formation of condensate like sport halls and warehouses.	Pre-galvanised according with EN 10142
C3	Average	>0.7 to 2.1	Atmospheres containing some salt or average levels of airborne pollution. Urban and light industrial areas. Areas effected by coastal conditions.	Areas with average levels of humidity and some airborne pollution resulting from production processes, like dairies, breweries and laundries.	Hot dip galvanised after manufacture in accordance with EN ISO 1461
C4	High	>2.1 to 4.2	Atmospheres with average salt content or discernible levels of airborn pollution Industrial and coastal areas.	Areas of high humidity and considerable airborne pollution experiance as the result of production processes like chemical plants, swimming pools and dockyards	Hot dip galvanised after manufacture in accordance with EN ISO 1461
C5-I	Very high (industrial)	>4.2 to 8.4	Industrial areas with high levels of humidity and aggressive atmospheres.	Areas with almost permanent condensation and large quantities of airborne pollution.	Stainless Steel AISI 304
C5-M	Very high (marine)	>4.2 to 8.4	Coastal and offshore areas with high salt content	Areas with almost permanent condensation and large quantities of airborne pollution.	Stainless Steel AISI 316

## Malzeme Seçimi

### Hot Dip Galvanised (HDG)

Hot-dip Galvanising is a coating method performed by dipping iron and steel products suitable for galvanising into a molten zinc bath at 450 °C, whereby diffusion of iron (Fe) and zinc (Zn) atoms occurs. In the galvanisation process, zinc and iron in steel body react with each other, forming a zinc – iron alloy on the material surface. When galvanised material is removed from the bath, the upper layer formed on the material surface has a similar composition with the galvanising bath. Dipping periods of steel materials for galvanising depends on the item weight and wall thickness.

In order that the mentioned iron-zinc reaction can be started, the material should be kept inside the molten zinc bath until the temperature of dipped material reaches to the temperature of the bath. When materials placed inside the zinc bath are coated, a thin layer occurs on the zinc bath surface which is caused by the cleaning chemicals and oxidation. These wastes should be removed from the bath surface before taking the coated material out of the bath.

In hot-dip galvanizing method, all the surfaces of the material, which is dipped to the molten zinc, even to the most critical points (sharp edges, cut corners, holes) are coated completely with zinc.

This form of galvanization affords very good value-for-money anti-corrosion protection in atmospheres with a pH value of between 6 and 13. However, in acidic environments where pH levels fall below 6 and in alkaline environments where the pH value exceeds 13, the protective zinc layer breaks down relatively quickly.

The zinc coating, that has a bright view at the first times, will later have a protective layer with a dull gray color.

The minimum coating thickness on the surfaces is 45µm (325gr/m<sup>2</sup>) and the average coating thickness on the surfaces is about 55µm (395gr/m<sup>2</sup>) in accordance with EN ISO 1461 quality standard.

Usage life of hot-dip galvanised cable trays & support units is predictable in any environments and it can keep its protective feature even in the heaviest atmospheric conditions. It can last at least 10-20 years in the heaviest industrial mediums and in regions close to seaside, and longer than 25 years in less harmful environments, without requiring any repair maintenance service. In situations where a maintenance is actually required, galvanising is very simple compared with the repair required by other protection methods.

### Pre-galvanised (PG)

This galvanization method is the one which is practiced before there is any fabrication done over the material. While this is also a method of hot-dip galvanizing, it differs in the thickness of coating and its order in the flowchart of the process. At the very simplest sense, after the coil of steel is flattened, it enters into an ammonium chloride (flux) mixture bath and then enters into the molten zinc bath continuously. After the zinc coating is smoothed it is then re-coiled and the manufacturing company uses this as a raw material for itself.

This homogeneous coating thickness on the surfaces has a changing value from 10µm to 20µm (70gr/m<sup>2</sup> 140gr/m<sup>2</sup>) in accordance with EN 10346.

Cable trays & support elements manufactured from a steel with such characteristics is recommended to be used inside buildings where dry air is present and lacking harming products and their related effects which may result in corrosion. Consequently, choosing cable trays made out of pre-galvanized steel where suitable conditions are available instead of hot-dip galvanized cable trays provides an economical advantage.

Material plated by pre-galvanizing method will be protected against corrosion on cut surfaces due to cathodic effect between zinc and iron elements. (It is valid and effective up to 2mm thickness).

## Malzeme Seçimi

### Stainless steel

Metalico stainless steel products, manufactured in accordance with SS 2333 AISI 304, or in accordance with SS 2348 AISI 316L are designed for use in highly aggressive environments, either indoors or outdoors, on industrial sites where there are high levels of potent airborne pollution such as in certain chemical industries, celluloserelated industries, refineries or artificial fertiliser factories, high humidity tunnels, etc.

Stainless steel products are also ideal for use in environments where special hygiene requirements are in force, such as dairies, abattoirs, other food industries and pharmaceuticals factories.

#### Stainless steel AISI 304 or AISI 316L

The deciding factor in choosing between stainless steel AISI 304 or AISI 316L is the aggressiveness of the environment in which it is to be used, and for this atmospheric chlorine content plays a significant role. Environments with a high chlorine content - coastal areas being a prime example - are aggressive and usually require the use of AISI 316L materials. When assessing the needs of factories, consideration should be given to the materials previously used to suspend equipment such as pipe tubing, and from this determine whether stainless steel AISI 304 or AISI 316L material is required.

#### Rate of dissolution

The rate of dissolution is determined by the pH value of pure zinc in distilled oxygenated water that has been pH adjusted to various levels using HCl or NaOH. NB The curve only applies to conditions shown, and gives only an indication of the propensity for corrosion without consideration.

### Passivation

Passivation of the stainless steel will occur naturally after pickling when the oxygen in the air will react with the surface of the steel to form a passive chromium oxide layer. However it is usual for this passivation process to be speeded up by immersing the article in a nitric acid or other passivating agent.

### Electropolishing

In various industries such as food, pharmaceutical and electronics, there is a requirement for easier cleaning and reduced bacterial growth on the surface of the stainless steel.

This increased surface smoothness is achieved by a process called electropolishing.

Electropolishing is, in principle, a reversal of the electroplating process. The article is submerged in a special acid electrolyte and a DC current passed into the article and through the electrolyte. This process removes the high spots from the surface micro roughness leaving a surface which is bright and smooth.

### EPOXY

Powder coated finishes give excellent protection against scratches as they are normally between 50 - 100% harder than the equivalent wet paint finishes. They are available in a wide range of colours and can have matt or various gloss finishes. In addition to the aesthetic qualities powder coating are available in various grades to cope with different site conditions. Grades are produced to cope with exterior applications where there can be high levels of ultra violet light or low smoke and fume applications for fire risk areas such as occur in tunnels. Because powder coated finishes are inherently resilient and resistant to chemical or corrosive attack, these finishes are frequently used for protection only where there is no aesthetic requirement.

### Electro-Galvanizing

Electrolytically, a zinc coating is deposited on the steel. The baths used cosist of acid or alkali solutions of zinc salts. The anodes are zinc and the parts to be coated, previously degreased and cleaned, are connected to the cathode. The minimum coating thickness by this method is 8µm. Such products are intended for use only in warm, dry areas with negligible pollutant levels.

# Loading, Offloading and Storage Warnings

## Yükleme, İndirme & Depolama Uyarıları

### Loading and Offloading Recommendations - Yükleme ve İndirme

Site deliveries should preferably only be made where suitable mechanical handling equipment is available on site.

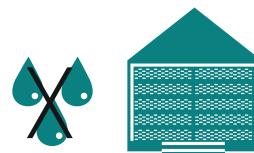

The delivered material must be treated with care. Lifting must only be carried out from the sides and the forklift truck tines must pass below a complete bundle. Tines must never\* be inserted into the end of the bundle, unless provision is made such as special packaging and/or extended tines, otherwise the safety limits of the lifting vehicle may be exceeded and damage may be caused to the equipment being lifted. For offloading by crane suitable lifting beams should be inserted from side to side beneath a bundle and these must be sufficiently long to avoid undue pressure on the edges of the bottom components.

The tensioned banding used for securing bundles of equipment during transport is not suitable for lifting purposes. When cutting this banding appropriate eye protection must be worn to avoid injury. Sheared steel (particularly pre-galvanized or stainless steel) does have relatively sharp edges and protective gloves must be worn during handling.

### Storage - Depolama

Warehousing of products in roofed and aired premises. Keep away from water! For protection of uncovered places damaged at assembly spray zinc paint is recommended.

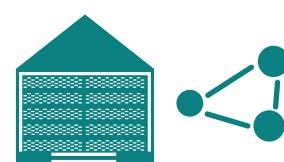

*Ürünler tercihen üstü kapalı ve kuru ortamda depolanmalı, nemli ve ıslak şartlardan uzak tutulmalıdır.*

### Storage Corrosion - Depolama Korozyonu

Wet storage stain (White Rust) is caused by the entrapment of moisture between surfaces of closely packed and poorly ventilated material for an extended period. Wet storage stain is usually superficial, having no affect on the properties of the metal.

Light staining normally disappears with weathering. Medium to heavy build up should be removed in order to allow the formation of normal protective film. Proper handling and storage will help to assure stain-free material. If product arrives wet, it should be unpacked and dried before storage. Dry material should be stored in a well ventilated low moisture" environment to avoid condensation formation.

Outdoor storage is undesirable, and should be avoided whenever possible.

*İslak depolama lekesi (beyaz pas), kötü havalandırılan ve bitişik paketlenen metallerin yüzeylerinde oluşur. Beyaz pas yüzeysel olduğu için malzemenin karakteristiğini etkilemez. Küçük lekeler havalandırınca geçer. Malzeme ıslak ise paketlenmemeli ve kuruması için bekletilmelidir. Kuru ürünler iyi havalandırılmış ve az nemli ortamlarda saklanmalıdır. Dış ortamda depolama tercih edilmemelidir.*

*Ürünlerin açık alanda depolanması önerilmemektedir.*

## Montaj Rehberi

Cable tray system design shall comply with NEC Article 318, NEMA VE 1, and NEMA FG 1, and shall follow safe work practices as described in NFPA 70E. These instructions and information do not intend to cover all details or variations in cable tray systems nor provide for every possible installation contingency.

**Construction Experience**—It is recommended that the work described be performed by qualified persons familiar with standard electrical construction practices, electrical equipment, and safety of electrical wiring systems.

When considering the installation of the cable supports system it is imperative to avoid the cutting or drilling of structural building members without the approval of the project leader on site.

Cable ladders, cable trays, wire mesh cable trays and their supports should be strong enough to meet the load requirements of the cable management system including cables and any future cable additions and any other additional loads applied to the system.

## Cable Tray Supports

### *Destek Sistemleri*

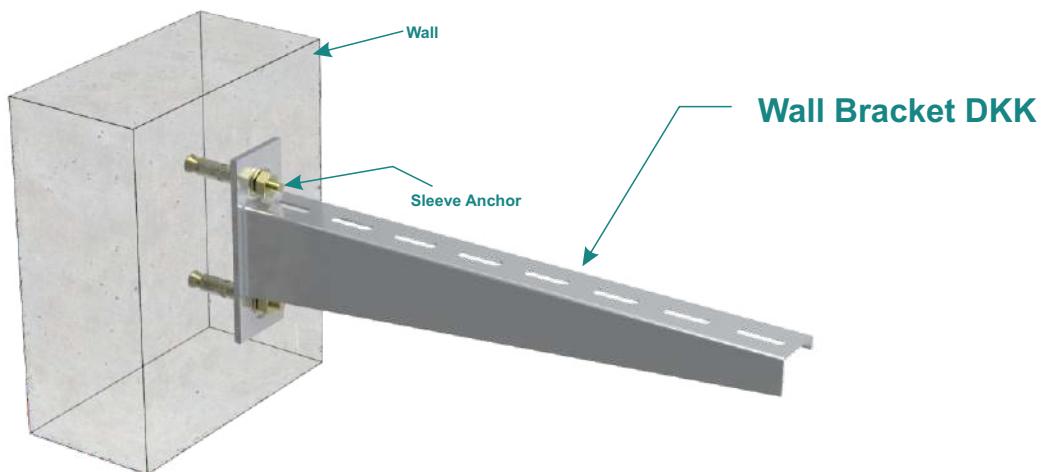

Support systems can be broken down into a number of elements or components.

To design a safe system it is necessary to check each element in turn to ensure:

- that it can safely support the loads being imposed upon it, and
- that the proposed fixings to adjacent components are also sufficient for the intended load and
- that any declared deflection limits are not exceeded.

## Horizontal Wall and Profile Brackets

### *Duvar Konsolları*

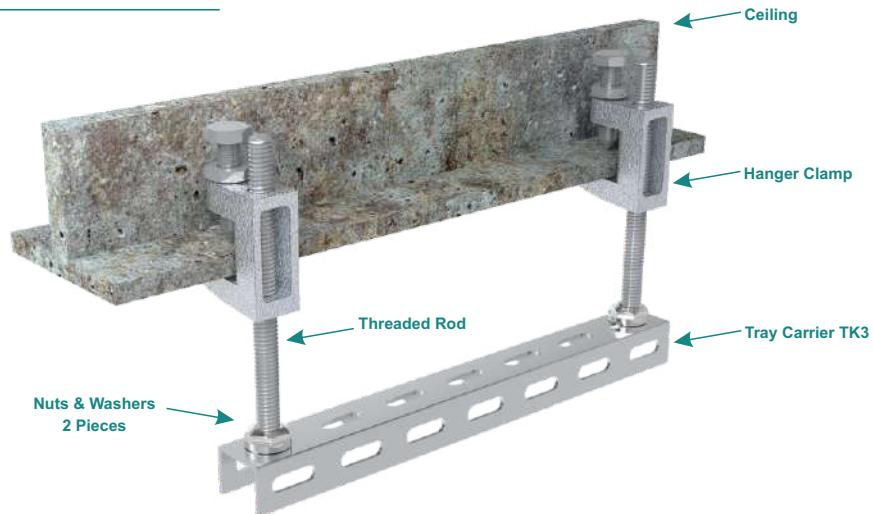

# Installation Guide

## Montaj Rehberi

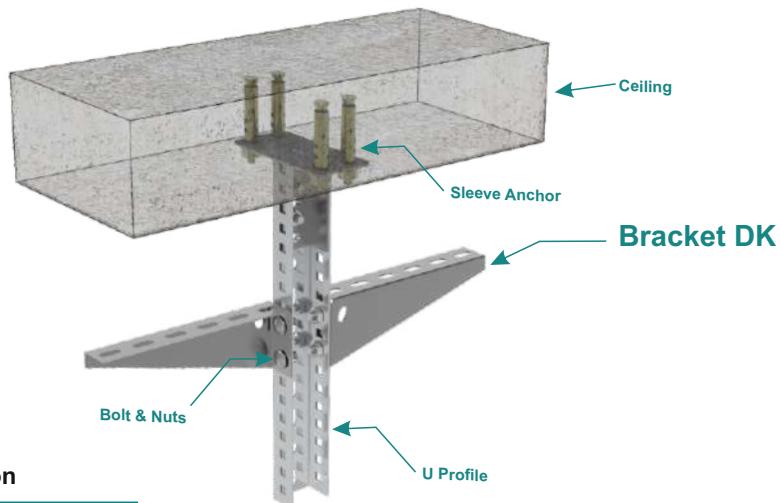

### Threaded Rod

Tıjlı Askı Taşıyıcılar

### U Support, C Support, I Support, L Support

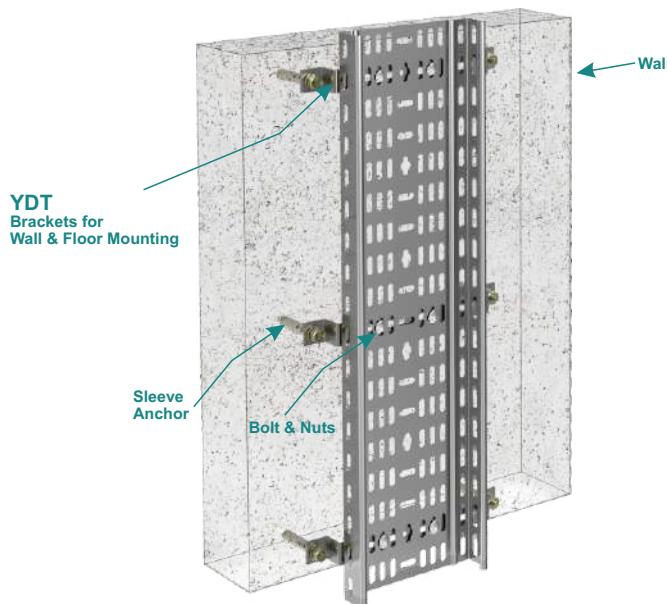

U,C,L ve L Destek Sistemleri

### Vertical Wall or Floor Application

Yere ve Duvara Sabitleme Elemenleri

Cable tray should not be laid exactly on the floor or roof. It should be mounted far enough off the floor or roof to allow the cables to exit through the bottom of the cable tay

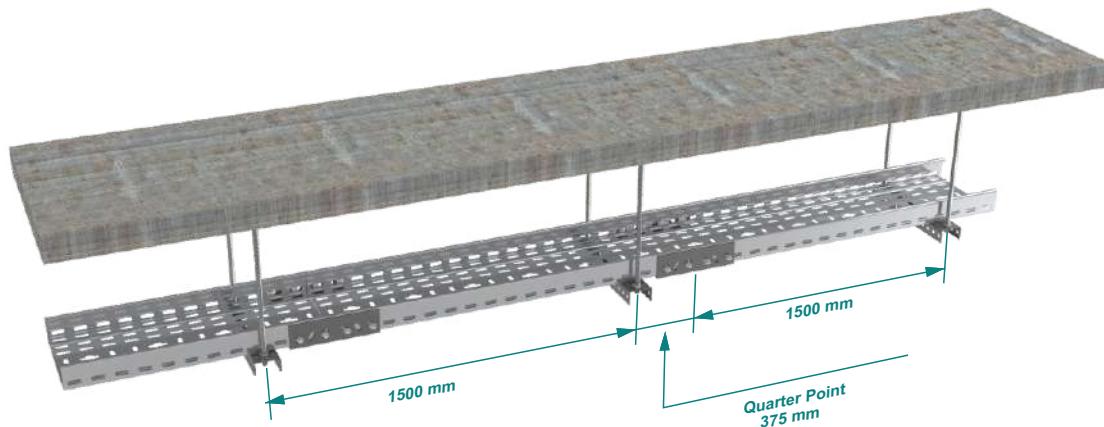

## Montaj Rehberi

### Straight Section Position

#### Boy Kanalların Uygulaması

When supports are installed, the installation of the cable tray can begin at any place that is convenient. It is not necessary to start at one end of the run. It is ideal to lay out the system so that tray connectors fall between the support and the quarter point. This maximizes the rigidity of the cable tray.

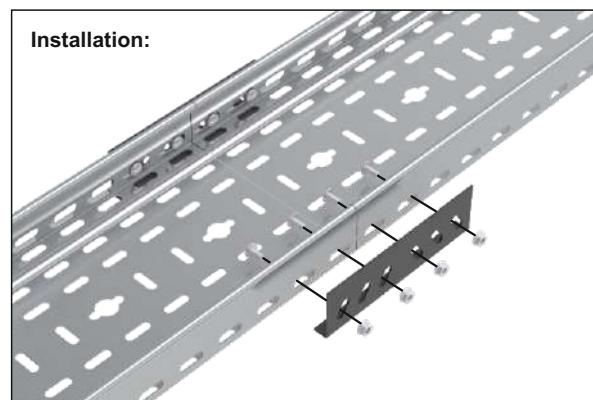

The support span should not be greater than the straight section length to ensure no more than one connector is located between supports. As a general practice, avoid placing connector over supports or at mid-span. However, certain cable tray systems and certain connection plate designs allow for random coupling location.

### Straight connectors (couplers, splice plates)

#### Birleştirme Ek Elemanı

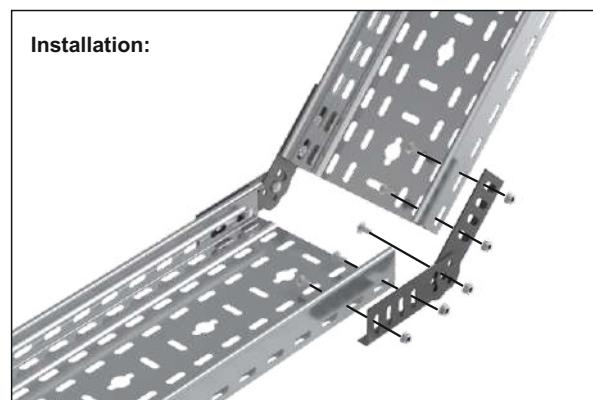

Place the next straight section across the next support, and attach it to the previous section with a pair of connection plates and hardware. Connection plates should be placed on the outside of the cable tray, with the bolt heads on the inside of the cable tray. Metal Cable tray connectors require bonding for electrical continuity. Supports should be located within 600 mm of each side of connection plates.

### Vertical adjustable connectors (splice plates)

#### Dikey Seviye Değiştirme Eki

For changes in vertical direction not requiring a radius, vertical adjustable connectors can be used. Supports should be located within 600 mm of each side of vertical adjustable connectors.

# Installation Guide

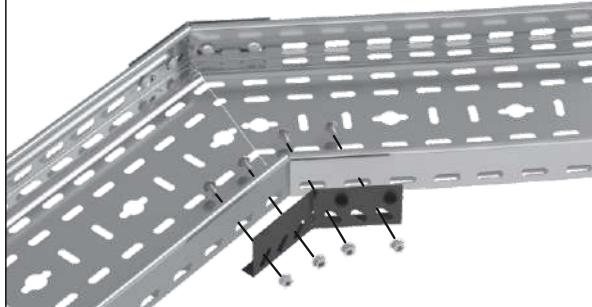

## Montaj Rehberi

### Horizontal Adjustable Connectors (Splice Plates)

#### *Yatay Seviye Değiştirme Eki*

For changes in horizontal direction not requiring a radius, horizontal adjustable connectors can be used. Supports should be located within 600 mm of each side of horizontal adjustable connectors.

#### Installation:

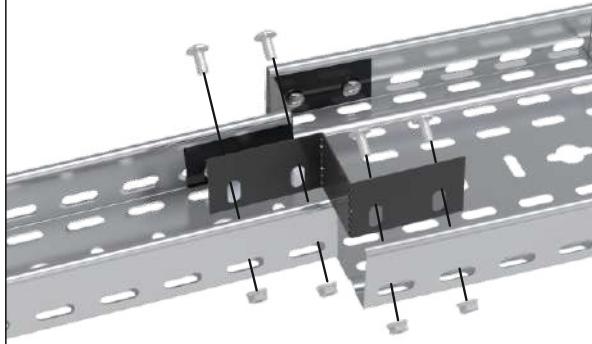

### Reducer Connector (Set)

#### *Parçalı Redüksiyon Eki (Takım)*

For immediate width changes, use reducing bend or parcial reducer. Supports should be located within 600 mm of each side of reducers.

#### Installation:

### Stop Ends (End Plates)

#### *Sonlandırma*

For dead-end closure indicating termination of cable tray run use stop ends.

#### Installation:

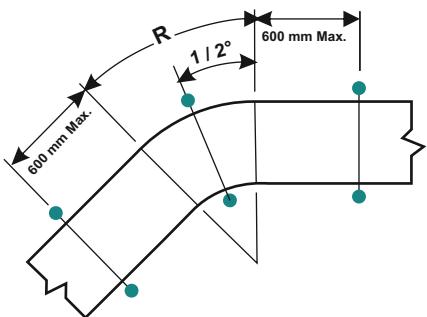

## Montaj Rehberi

### Horizontal Elbow Support

#### Yatay Dönüş Desteği

Supports for horizontal cable tray fittings should be placed within 600 mm of each fitting extremity, and as follows:

- a. 90° supports at the 45° point of arc.
- b. 60° supports at the 30° point of arc.
- c. 45° supports at the 22-1/2° point of arc (except for the 300 mm radius).
- d. 30° supports at the 15° point of arc (except for the 300 mm radius).

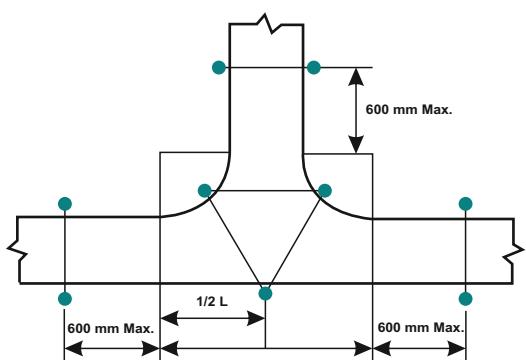

*Central support not required on 300mm radius 30° and 45° fittings*

### Horizontal Tee Support

#### T-Dönüş Desteği

Supports for horizontal cable tray fittings should be placed within 600 mm of each fitting extremity, and as follows:

- a. 90° supports at the 45° point of arc.
- b. 60° supports at the 30° point of arc.
- c. 45° supports at the 22-1/2° point of arc (except for the 300 mm radius).
- d. 30° supports at the 15° point of arc (except for the 300 mm radius).

*Central support not required on 300mm radius fittings*

# Installation Guide

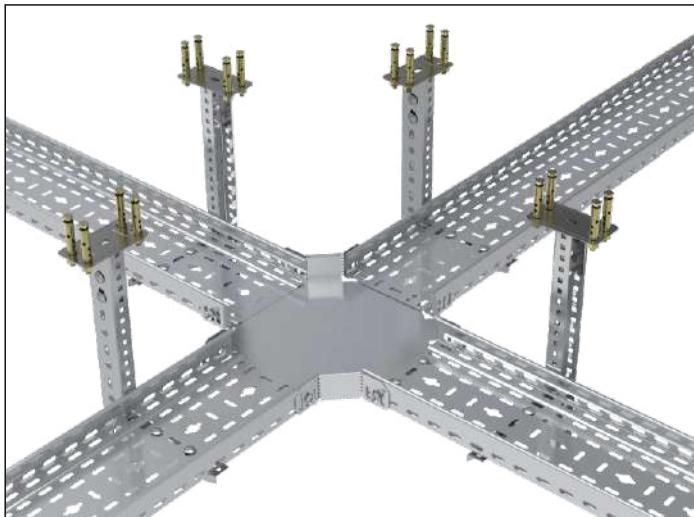

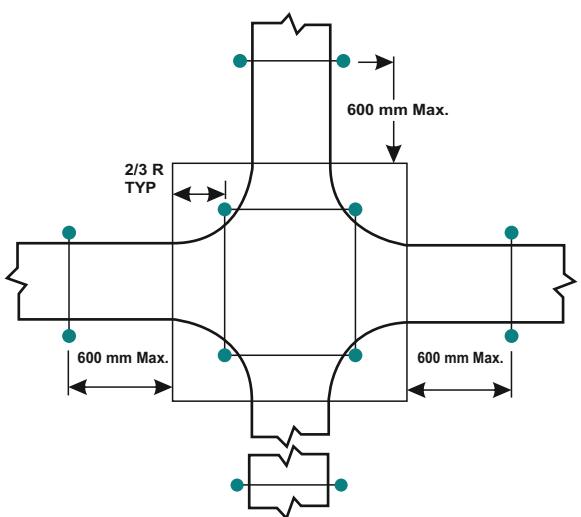

## Montaj Rehberi

### Horizontal Cross Support

#### Dörtlü Bağlantı Desteği

Place horizontal cross support within 600 mm of each of the four openings connected to other cable tray items for the 300 mm radius. On all other radius, at least one additional support should be placed under each side rail of the horizontal cross, preferably as shown.

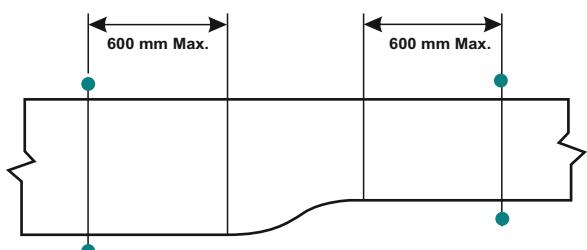

*Central support not required on 300mm radius fittings*

### Reducer Support

#### Redüksiyon Desteği

Place reducer supports within 600 mm of each fitting extremity.

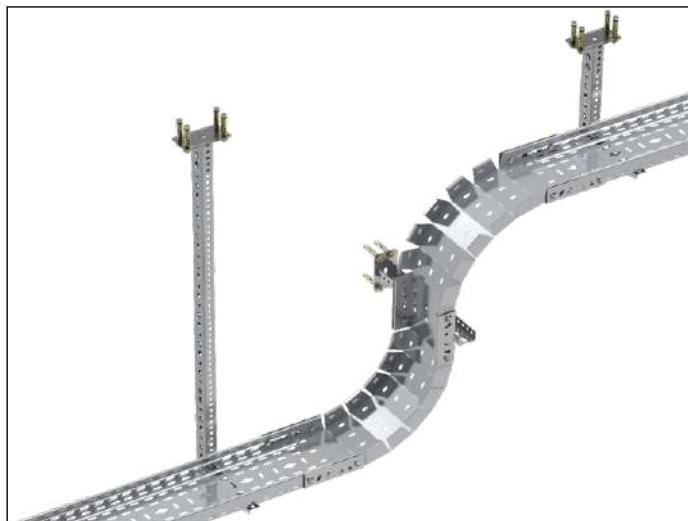

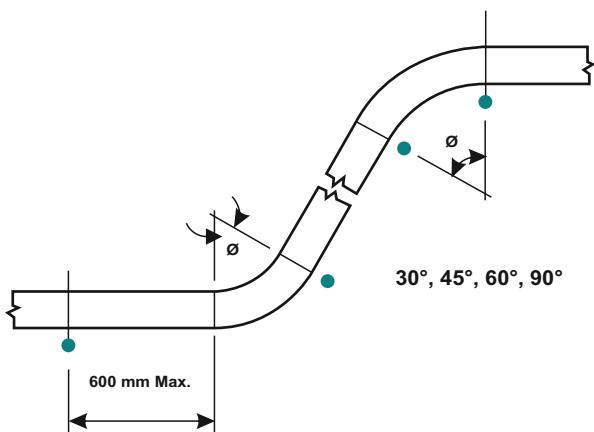

## Montaj Rehberi

### Vertical Cable Tray Elbow

#### İç Dış Bükey Desteği

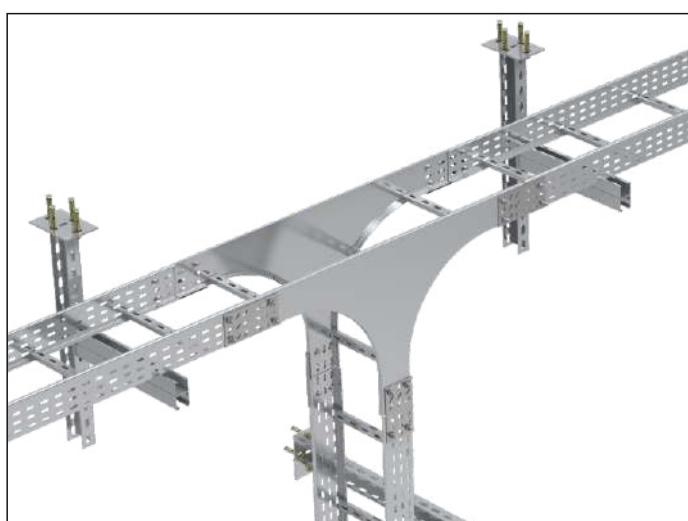

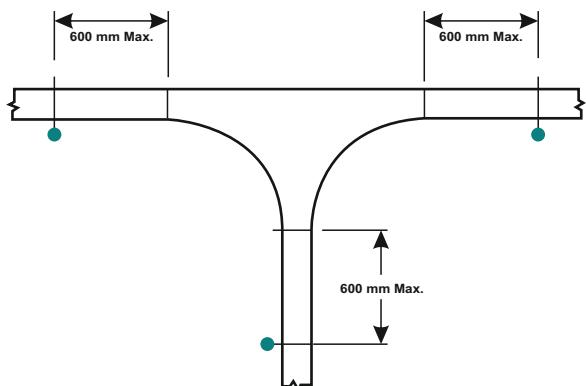

Vertical cable tray elbows at the top of runs should be supported at each end. At the bottom of runs, they should be supported at the top of the elbow and within 600 mm of the lower extremity of the elbows.

### Vertical Cable Tray Tee Support

#### Dikey T Bükey Desteği

Vertical cable tray tees should be supported within 600 mm of each fitting extremity.

## Teknik Bilgiler

### Tray and support deformation

The weight of cables deforms trays, the most visible point being in the centre between supports. The allowable value ( $F$ ) of deformation is purely aesthetic, always taking care not to exceed the values indicated by the manufacturer, which, in accordance with international standard EN 61537, should be as follows:

On supports, maximum  $F$  deformation and twisting occurs at the ends. The standard requires that the maximum  $F = L/20$  mm. The deformation,  $F$  is called deflection, and is expressed in mm.

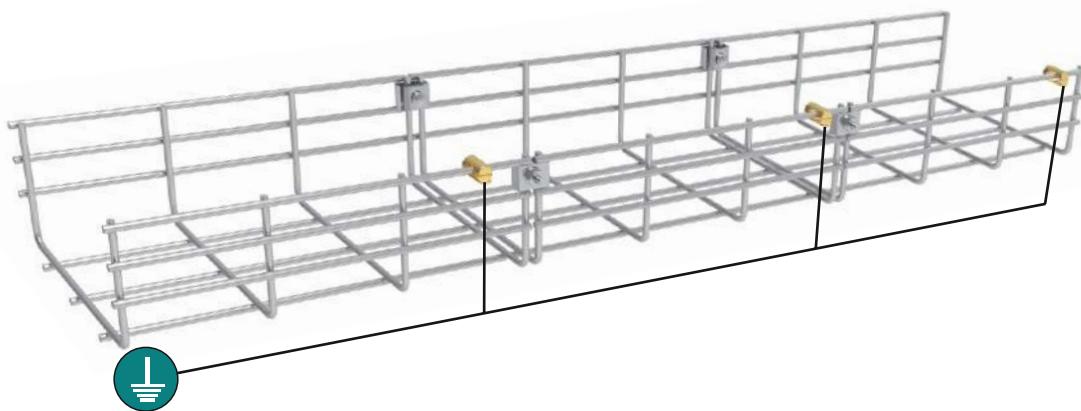

### Earthing (Electrical continuity)

All metal tray systems must have proper electrical continuity. However, to ensure safety, it is advisable to make an earth connection using a suitable conductor for each part of the system.

This cannot be done on painted or epoxy-coated trays without removing the protective layer at that point and at the join-points between the various lengths, which will inevitably lead to oxidisation

Without ensuring safety

## Installation Examples

Application Example of GPK

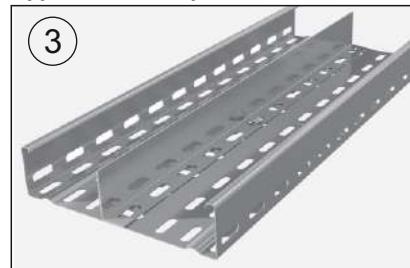

Sliding in - To install cable tray - straight use Screw Sets CFS M6 or CFS M8

Application Example of KBE

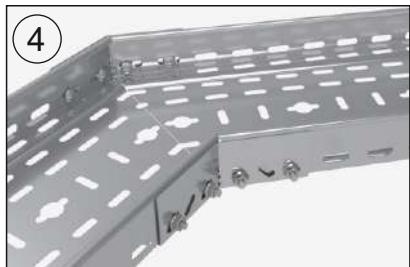

To install cable tray - straight use 2 pieces of KBE and CFS bolts and nuts (M6 or M8)

Application Example of SEP

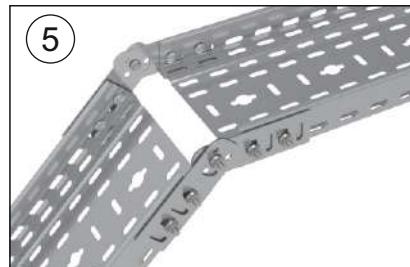

To install cable tray - straight use Screw Sets CFS M6 or CFS M8

Application Example of BYD

To install cable tray - straight use Screw Sets CFS M6 or CFS M8

Application Example of BDD

To install cable tray - straight use Screw Sets CFS M6 or CFS M8

Application Example of RT

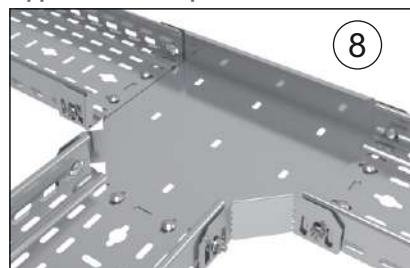

To install cable tray - straight use Screw Sets CFS M6 or CFS M8

Application Example of KA90

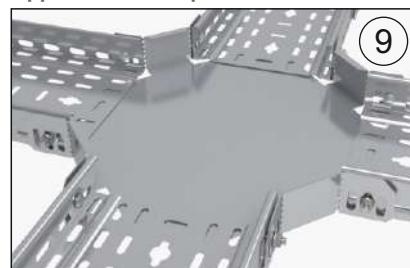

To install cable tray - straight use Screw Sets CFS M6 or CFS M8

Application Example of KAT

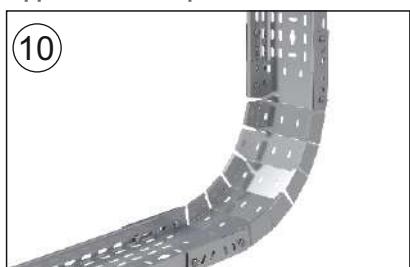

To install cable tray - straight use Screw Sets CFS M6 or CFS M8

Application Example of KAD

To install cable tray - straight use Screw Sets CFS M6 or CFS M8

Application Example of KAIB

To install cable tray - straight use 2 pieces of KBE and CFS bolts and nuts (M6 or M8)

Application Example of KADB

To install cable tray - straight use 2 pieces of KBE and CFS bolts and nuts (M6 or M8)

Application Example of KA45

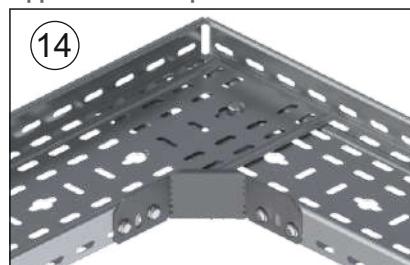

To install cable tray - straight use Screw Sets CFS M6 or CFS M8

Application Example of SON

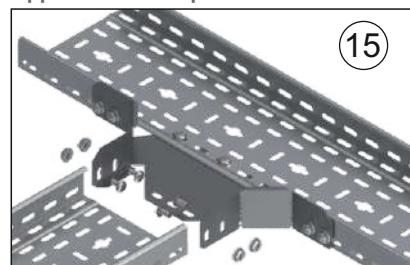

To install cable tray - straight use Screw Sets CFS M6 or CFS M8

Application Example of KA90E

To install cable tray - straight use Screw Sets CFS M6 or CFS M8

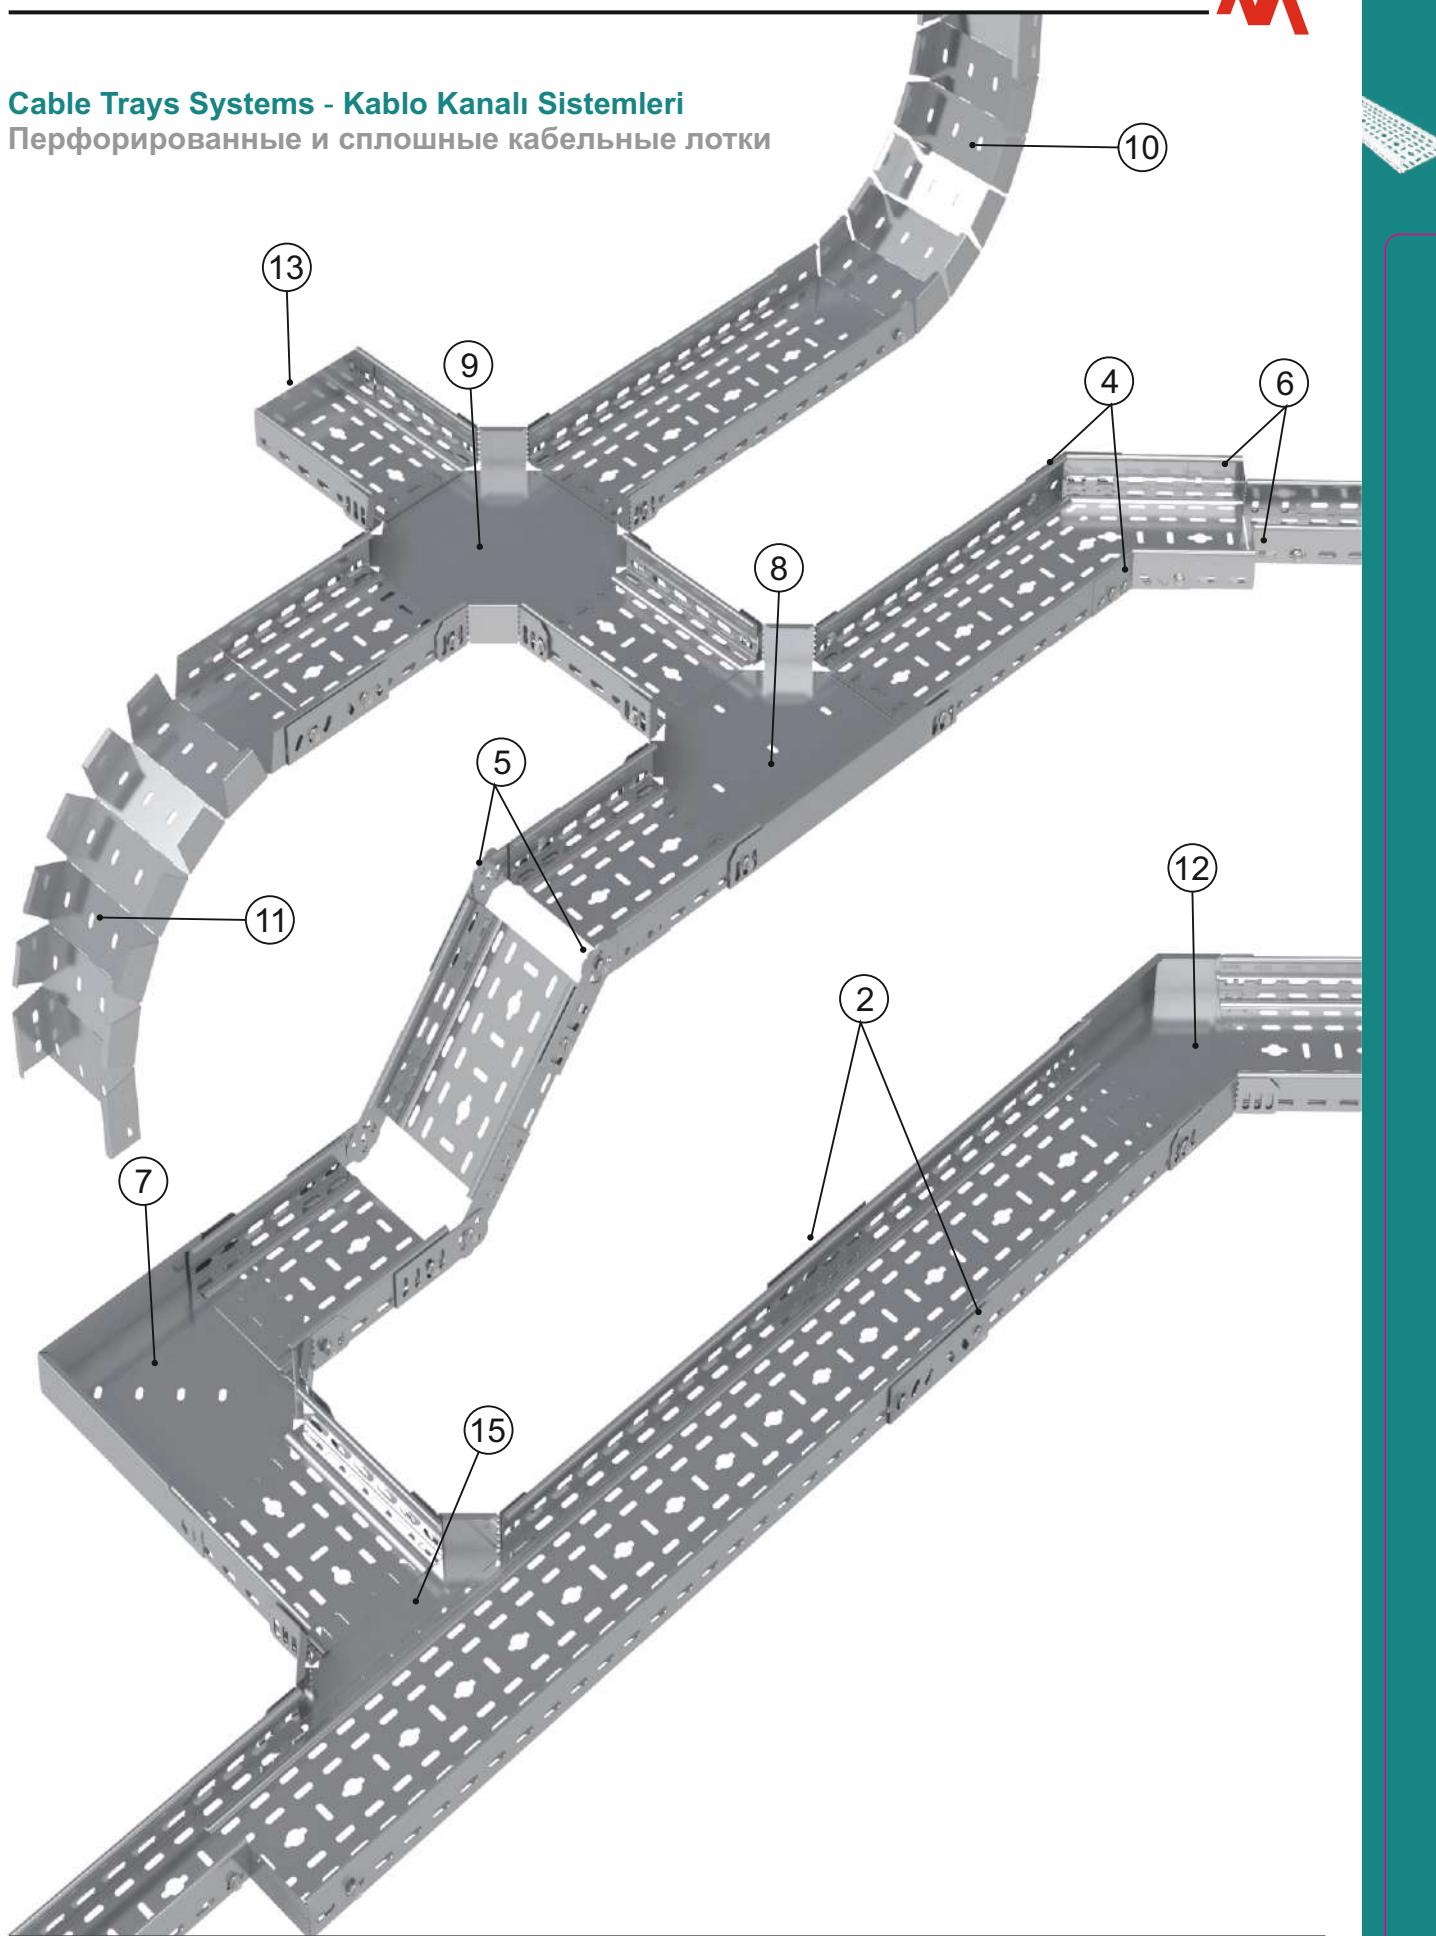

Application Example of KATE

To install cable tray - straight use Screw Sets CFS M6 or CFS M8

## Cable Trays Systems - Kablo Kanalı Sistemleri

HDG-steel, hot-dip galv. to TS-EN ISO 1461:2011 (HDG)  
SS- stainless steel AISI 304L and AISI 316L (SS)  
EP- powder coating in a full range of colours (RAL)

Thickness (cc) [mm]:

## Adjustable Vertical Connector (2 Pcs)

Dikey Seviye Değiştirme Eki (2 Adet) - Шарнирный соединитель для лотка

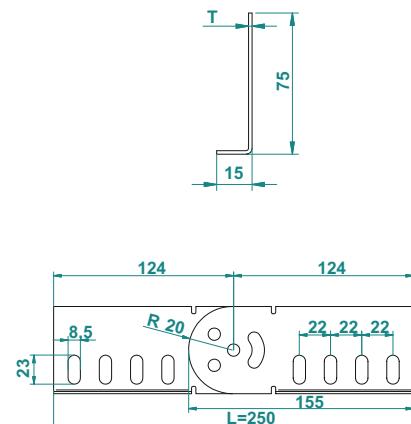

Pre - Galvanised

BDD 2 ... H80		
CODE	Length L mm	1.2mm
BDD 280 12 PG	250	0.22 1

To Install one lenght; use 2 pieces of BDD connector and 10 sets of CFS bolts and nuts. (M6 or M8 )

BDD 2 ... H80		
CODE	Length L mm	1.5mm
BDD 280 15 PG	250	0.27 1

## BDD 2 H80

## Adjustable Horizontal Connector

Yatay Seviye Değiştirme Eki - Угловой соединитель

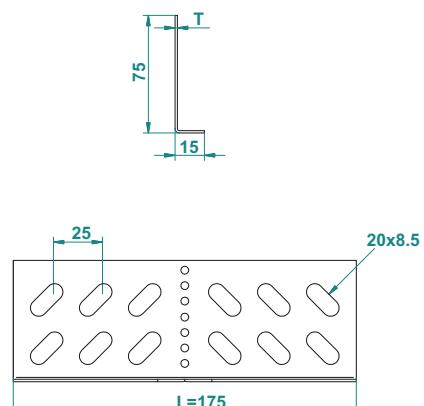

Pre - Galvanised

BYD 2 ... H80		
CODE	Length L mm	1.2mm
BYD 280 12 PG	175	0.12 1

To Install one lenght; use 2 pieces of BYD connector and 8 sets of CFS bolts and nuts. (M6 or M8)

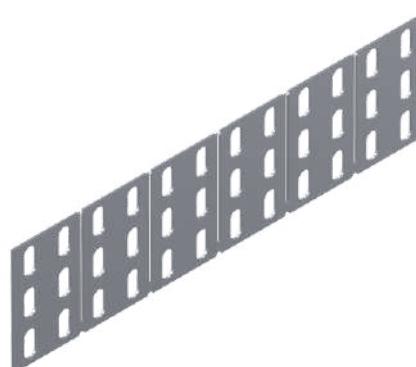

BYD 2 ... H80		
CODE	Length L mm	1.5mm
BYD 280 15 PG	175	0.15 1

## BYD 2 H80

## Adjustable horizontal connector - Long Type

Yatay seviye değiştirme eki uzun tip - Угловой соединитель - длинный

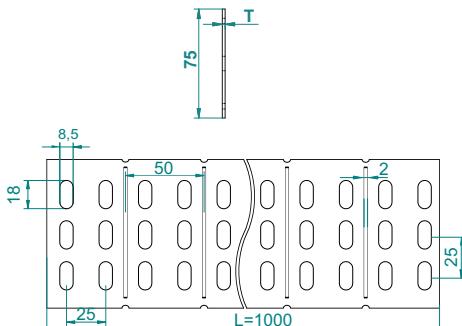

Important!  
To install cable tray - connector use Screw Sets  
CFS M6 or CFS M8

Pre - Galvanised

BYDU 1 ... H80		
CODE	Length L mm	1.2mm
BYDU 180 12 PG	1000	0.29 1

BYDU 1 ... H80		
CODE	Length L mm	1.5mm
BYDU 180 15 PG	1000	0.36 1

## BYDU 1 H80

APPLICATIONS  
Cable routing

### MATERIAL

Steel, strip-galv. acc. to the Sendzimir method  
to TS-EN 10346:2011 (PG)

Available finishes:

HDG-steel, hot-dip galv. to TS-EN ISO 1461:2011 (HDG)  
SS- stainless steel AISI 304L and AISI 316L (SS)  
EP- powder coating in a full range of colours (RAL)

## PMD H100

## APPLICATIONS

Cable routing

## MATERIAL

Steel, strip-galv. acc. to the Sendzimir method  
to TS-EN 10346:2011 (PG)

Available finishes:

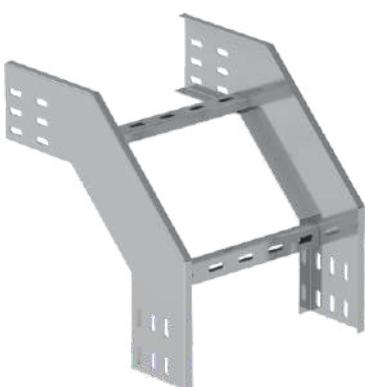

HDG-steel, hot-dip galv. to TS-EN ISO 1461:2011 (HDG)  
SS- stainless steel AISI 304L and AISI 316L (SS)

EP- powder coating in a full range of colours (RAL)

Thickn. (ga) [mm]: 1.2 | 1.5

## Vertical 90° Outside Bend of Cable Ladder (Stable)

90° Dikey Merdiven Dış Bükey Elemani - (Sabit) - Арка фиксированная кабельроста, внешняя 90°

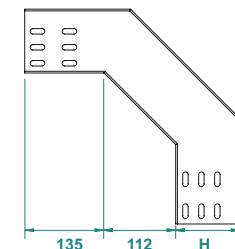

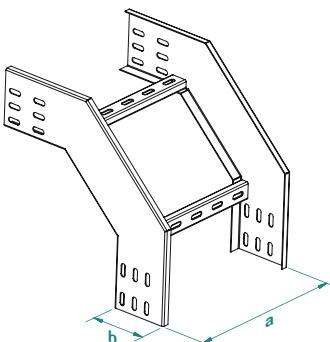

**Important!**  
To instal vertical bend - use 2 pieces of KBE connectors and 4 sets of CFS bolts and nuts (M6 or M8)

### Pre - Galvanised

### TOK H85

This diagram comply with IEC 61537 with connection to 1/5 of the span and the end span =0.8x the span

Q = max. admissible load (kg/m)

L = support distance (m)

f = Deflection (mm) / Max. deflection = L/100

Safety co-efficient = 1.5

Width	Usable Cross-Section
100	75 cm <sup>2</sup>
150	112 cm <sup>2</sup>
200	150 cm <sup>2</sup>
300	225 cm <sup>2</sup>
400	300 cm <sup>2</sup>
500	375 cm <sup>2</sup>
600	450 cm <sup>2</sup>

### APPLICATIONS

Cable routing

### MATERIAL

EG: Electro - Galvanised (8-12 micron) EN ISO 2081

HDG-Steel, hot-dip galv. to TS-EN ISO 1461:2011 (HDG)

Available finishes:

SS - Stainless steel AISI 304L and aisi 316L (SS)

EP - powder coating in a full range of colours (RAL)

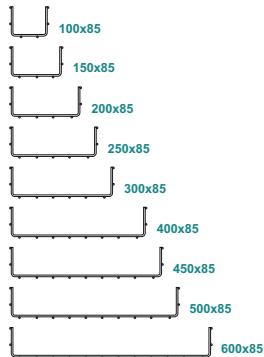

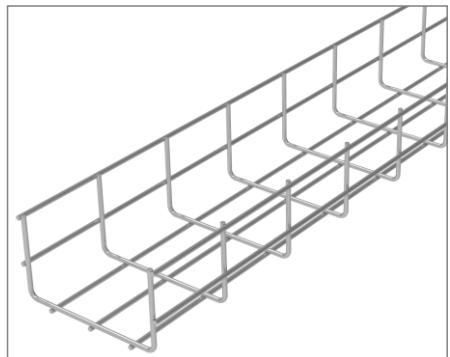

Thickness (ga) [mm]: 4.0 | 4.5 | 5.0

C83 1050 25 HDG	2,5	1050	6,05 1

Thickness T: 2,5 mm

Safe Working Load F in kN

APPLICATIONS

Cable routing

MATERIAL

HDG-Steel, hot-dip galv. to TS-EN ISO 1461:2011 (HDG)

Available finishes:

EG: Electro-galvanised (8-12 Micron) EN ISO 2081

SS: Stainless steel AISI 304L and 316L (SS)

EP- Powder coating in a full range of colours (RAL)

Thickness (ga) [mm]: 2.0 2.5

### General features

Raw MaterialPVC UL94, V0 M1

Impact Resistance : 2 Joule

Operation Temperature : -25 +65 Co

Colour : White RAL 9010

IP Ingress Protection : IP40

### Additional Features

UV resistant

Easy install, paintable, non-flammable,

Economic and adaptable

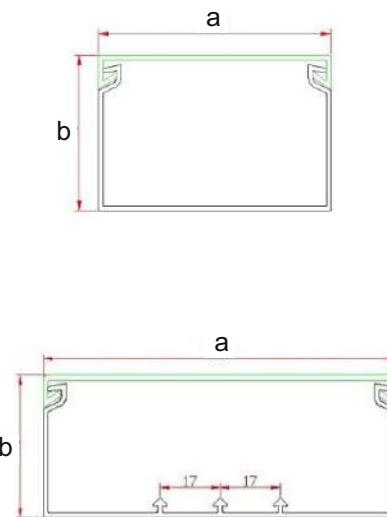

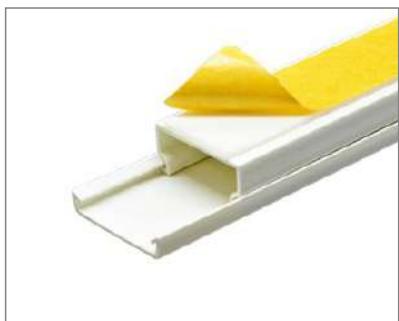

Resistant to acids, oils and greases

Non-conductive

Nonflammable

## Adhesive PVC Trunking

## Earthing Systems

As a crucial safety element in electrical networks, earthing infrastructures have gained their long-deserved importance in the last years. Consequently, application criteria have improved with widening diversity of equipments.

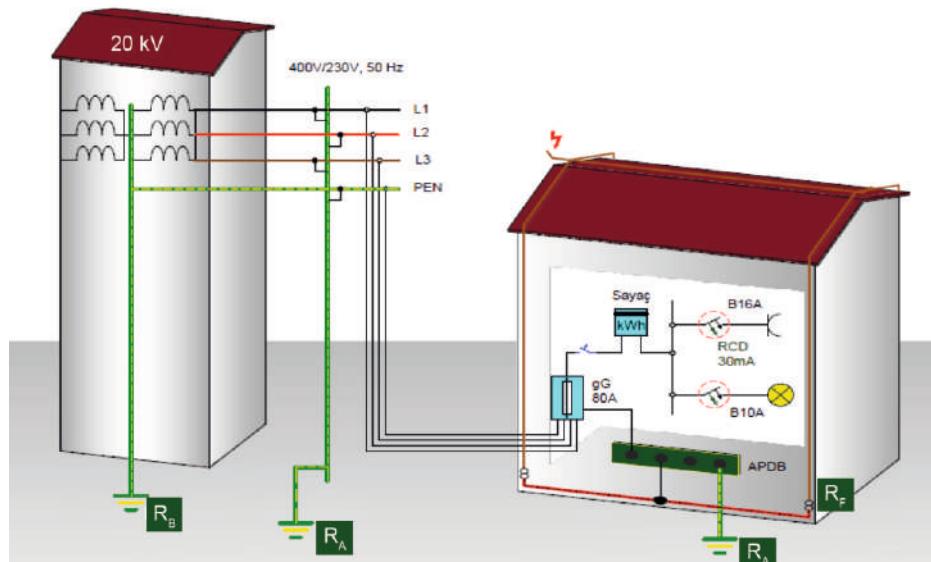

Having keen expertise in the application field, our company strives to serve beyond sales in providing every sort of equipment. In a sector that requires quick and correct delivery, MTK is able to meet the requirements of the customers with a wide product range of copper and galvanized conductors and related connection elements in a prompt fashion thanks to its diligence in stock and transportation.

In electricity terms, earthing is connecting a conductive element to the ground via a conductive path.

### Protective Earthing

Protective earthing ( $R_A$ ) is earthing of metal parts -that do not carry voltage under normal operation but may carry voltage due to a fault- in order to protect people or other living things against hazardous touch or step voltage.

In a low resistance protective earthing, a fault voltage is fed through the faulty circuit during the fault, therefore enabling the breakers to instantly break the circuit and therefore cut the energy on the faulty circuit.

### Operational and Functional Earthing

Operational Earthing ( $R_B$ ) is the earthing of the voltage of active parts of operational devices of an electrical facility that are under voltage against earth in attempt to keep at a specific value (e.g. star point earthing)

Functional Earthing ( $R_F$ ) is earthing of a communication facility or an operational device in order to resume the desired function.

## Foundation Earthing

In terms of installation and operation of electrical systems, the primary purpose of earthing is to protect humans and animals from hazardous voltages. In addition, earthing also prevents potential surges and secondary impacts. In Turkey, installation and operation of earthing facilities are regulated in issue 24500 of the Official Gazette (dtd. Aug.8, 2001) where all technical details for foundation earthing have been covered. In attempt to summarize the significance of these terms, extra care must be exercised at all times to acknowledge and practice them.

- Foundation earthing electrode should be made as a closed ring and be placed at the external walls or foundation platform of the building.
- Foundation earthing electrode should be thoroughly covered in concrete and placed in a way that it is surrounded with 5 cm of concrete at all its sides once the foundation concrete has been laid. Final points must extrude from the foundation.
- The placement of the earthing electrode inside the concrete must be fixed with supports at appropriate distances, such as with 30cm long rods in 2m intervals.
- In reinforced foundations (such as steel mesh), earthing electrode must be placed on the lowermost mesh and fixed to the steel mesh in 2m intervals.
- In foundation earthing, 30x3.5mm galvanized steel strips or 10mm diameter round galvanized steel rods must be used.
- In buildings with large base foundations, the area surrounding the foundation earthing must be installed in at most 20x20m sections.
- Connection joints of the foundation earthing must be at least 1,5 meter in length into the building and must be protected against corrosion at the points of exit.
- Potential balancing bars must be used at all times.
- For main potential balancing, connection elements or joints must be connected to the potential balancing bar and placed near the main panel of the building.
- For convenient separation of earth conductors during resistance measurements, related setup must be placed in a reachable manner.
- Separation assembly of the earth conductor must have high mechanical durability.
- Equipments to be used in foundation earthing must be chosen in order to prevent corrosion.
- Materials used in the rod joints must be of the same mechanical durability.
- Foundation earthing also serves as earthing in lightning protection systems. Therefore, a number of exits are left open using either cables with at least 50 mm<sup>2</sup> (NYY) section or steel strips.
- Foundation earthing must strictly comply with the pertaining details in the earthing project which is a prerequisite for the approval of the electrical project of the building.

## Calculation of Earth Resistance According to Soil Types

Foundation Earthing electrode

$$R_E = \frac{2q_E}{\pi D}$$

Earthing plate

$$R_E = \frac{q_E}{2D} \left( 0.5 + \frac{d}{4\pi H} \right)$$

Earthing mesh

$$R_E = \frac{q_E}{2D} \ln \frac{q_E}{L}$$

$q_E$ : Soil resistivity (Ohm.m)

L: Length of earthing electrode (m)

d: If circular, diameter (mm) of earthing electrode

If rectangular, half the thickness (short side) of earthing electrode (m)

Diameter of a circle equal to the area covered by the earthing electrode (m).

Area covered by the earthing electrode ( $m^{-2}$ )

H: Burying depth measured at center.

Earthing rod

$$R_E = \frac{q_E}{2\pi L} \times \ln \frac{4L}{d}$$

Earthing strip

$$R_E = \frac{q_E}{\pi D} \ln \frac{2L}{d}$$

Earthing ring

$$R_E = \frac{q_E}{D\pi^2} \ln \frac{2\pi D}{d}$$

## Soil Resistivity Values

Resistivity of soil depends on the type, density, moisture and temperature. Although the following table can be used for different types of soil, it's more appropriate to use values determined by measurements made on site.

### Soil Resistivity in AC Current

Type of Soil	Soil Resistivity (Ohm.m)
Bataklık / Swamp	5 - 40
Çamur, Kil / Clay	20 - 200
Kum / Sand	200 - 2500
Çakıl / Gravel	2000 - 3000

$\equiv 100 \text{ Ohm.m}$  Diffusion Resistance Values for Earthing in Soil With a Resistivity of  $q$

Earthing electrode	30x3 mm Strip					d=20 mm Rod			
	I	10 m	25 m	50 m	100 m	1 m	1.5 m	3.5 m	7 m
$R_E$	30.25	13.27	7.07	3.76	84.4	60.55	29.80	16.48	
<hr/>									
Earthing electrode	Ring section (circular) 95mm <sup>2</sup> Cu d=12.7 mm					Foundation 30x3 mm Strip+Iron Armatures+ Concrete			
D	20 m	50 m	100 m	150 m	20 m	50 m	100 m	150 m	
$R_E$	4.67	2.05	1.1	0.76	3.18	1.27	0.64	0.42	

## Örgülü Bakır İletkenler Bare Stranded Copper Cable

Part No.	Material	Conductor Diameter (mm <sup>2</sup> )	Stranding No. (Ø)	Nominal Diameter (Ø)	Weight (m)
ET.C.SW.10	Cu	10	7x1.35	4.20 mm	0,09
ET.C.SW.16	Cu	16	7x1.70	5.10 mm	0,14

## Toprak İyileştirici Komponent Ground Enhancement Component

Part No.	Weight (each)
ET.00.MT.12	12,00

## Toprak İyileştirici Komponent Ground Enhancement Component

Part No.	Weight (each)
ET.00.MT.11	11,20

Topraklama geçiş direnci; Toprağa çakılan/gömülen iletkenlerin yüzeyi ile toprak arasındaki temastan dolayı oluşan bir dirençtir. Topraklama direncini istenilen seviyeye düşürebilmemiz, düşük topraklama geçiş dirençleriyle sağlanabilir. Topraklama Katkı Komponenti topraklama elektrodları ile toprak arasındaki elektriksel iletkenliği artıran iyon yapısı kuvvetli malzemelerdir.

Earthing transition resistance is generated as a result of the contact between the soil and the conductors inserted/buried. Decreasing the earthing resistance to a desired level is possible with low transition resistance. Earthing enhancement materials are ionized powders that increase the conductivity between the soil and the earthing electrodes.

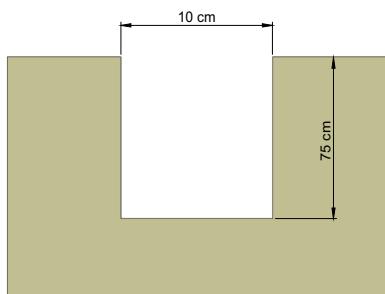

- **Kolay Uygulanır**  
Easy application
- **Her Türlü Toprakta Kullanılır**  
Applicable to any type of soil
- **Hava Şartlarından Etkilenmez**  
Weather-proof
- Periodik olarak kontrol edilmesine gerek yoktur  
Does not require periodical check

StZn: Galvanizli Çelik / Hot Dip Galvanized Steel

Anahtar Ölçüsü / Spanner 10 mm

Ürün Kodu sonunda belirtilen "E" (Elektrogalvaniz) Civata Özelliğini belirler.

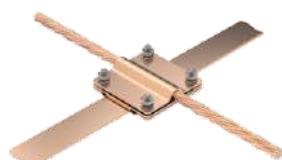

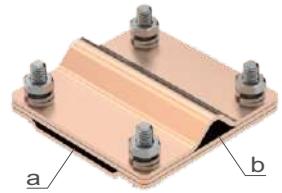

"E" (Electrogalvanized) suffixes denote bolt properties.

Kilitli Tip Özelliği: Kullanıcıya montaj kolaylığı sunmaktadır.

Square bolts for easy installation.

## Galvaniz Dikey Bağlantı Klemensleri Hot Dip Galvanized Vertical Clamp

Thermowelding must be done according to the following:

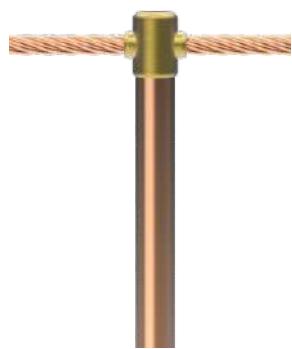

Conductors are placed in the mould. The mould is closed with a suitable handle clamp making sure the seams are tightly closed.

Metal disk (1) is inserted to the mold. Sufficient welding powder (2) is poured in the mould over the metal disk. Lastly, Igniting powder (3) is poured on top and ignited with flint gun.

Molten copper compound will melt the metal disk and flow into the weld container. Reaction takes place safely inside the container.

After the molten copper compound cools off and the thermo welding is complete, the mould is cleaned with the brush for the next use.

## Lightning Protection Systems

Lightning, one of the most serious natural disasters, has increasing threats worldwide on human life and premises alike. Although unavoidable, it is still possible to minimize the damages. Starting from 1800's and improving in parallel with advanced technologies, the quest for lightning protection has reached a level where fears and concerns have gradually been diminishing. We offer all sorts of equipments to our customers both through importing and production along with a know-how on engineering and expertise. In every field of the lightning protection industry, which can be classified as active lightning rods, caging methods and surge protection, we deliver products and services that strictly comply with national regulations and production criteria.

## Determining the Protection Level in Lightning Protection Systems

To minimize lightning-related losses, various protection measures are required to be taken. Whether they are needed or the protection levels thereof are determined by risk analyses that depend largely on the number of lightning strikes, size and properties of the building and its location as well as environmental factors. Abovementioned analyses are done as follows:

To determine the protection level,  $N_d$  value is compared to  $N_c$  value; where:

$N_d$  is the probable frequency of direct lightning strikes on a building

$N_c$  is the average annual frequency of discharges assumed for the building inspected.

If  $N_d \leq N_c$ ; then a lightning protection system is not compulsory

If  $N_d > N_c$ ; then a lightning protection system must be present.

Protection level of such system is calculated by the formula:  $E = 1 - (N_c / N_d)$

LPS Efficiency, E	Protection Level
$E > 0.98$	Protection Level 1 + Additional measures
$0.95 < E \leq 0.98$	Protection Level 1
$0.90 < E \leq 0.95$	Protection Level 2
$0.80 < E \leq 0.90$	Protection Level 3
$0 < E \leq 0.80$	Protection Level 4

$N_d$  value is calculated as follows:

$$N_d = N_g A_e C_e \cdot 10^{-6} \text{ (ea/yr)}$$

$N_g$  is the density of lightning discharge on the ground;  $C_e$  is the environmental factor;  $A_e$  is the equivalent lightning collection area of the building ( $\text{m}^2$ ).

$$N_g = 0.04 T_d^{1.25} \text{ Lightnings /year.km}^2 \text{; where:}$$

Value of  $A_e$  being in square meters, h is height; a is length and b is width of the building:

$$A_e = ab + 6h(a+b) + 9\pi$$

$C_e$  = Environmental factor

Environmental Factor surrounding the building	$C_e$
Presence of any other high buildings or structures (towers, forests, etc)	0.25
Building with smaller buildings around it	0.5
Isolated building; where a building is separated from the others by at least 3h distance	1
Building on a hill top	2

$N_c$  is calculated as follows  $N_c = A \cdot B \cdot C$

A	Coefficient of construction type (type of building, building materials)
B	Coefficient of purpose of the building and the monetary value of objects
C	Coefficient of damages

$$A = A_1 \cdot A_2 \cdot A_3 \cdot A_4$$

Duvarların yapılış tarzına ilişkin bileşen,	$A_1$	Coefficient of wall type	$A_1$

**Aktif Paratoner**  
Active Lightning Conductor

Part No.	$\Delta T$ Value	Weight (each)
EY.00.PPULSAR 60	155µs	3,70
EY.00.PPULSAR 45	70µs	3,50
EY.00.PPULSAR 30	45µs	3,40

Pulsar'ın  $\Delta T$  değerleri, 5 farklı ülkedeki çeşitli yüksek gerilim laboratuvarlarında yapılan testlerle belirlenmiştir. LCIE, BSI, SOULE, BAZET, WHVRI gibi sertifikalara sahip olan Pulsar, 155 mikrosaniyelik  $\Delta T$  değerine sahiptir.

Pulsar, enerjisini yıldırımlı havadaki mevcut elektrik alanından temin eder (10 ila 20 kV/m). Havadaki elektrik alan yoğunluğu, yıldırının oluşabileceği minimum değeri bulduğunda Pulsar çalışmaya başlar. Bu da Pulsar'ın sadece yıldırım riski olan havalarda çalışmasını, diğer zamanlarda pasif uç görevi görmesini sağlar. Böylece düşmeyecek yıldırımları tetiklemez.

Pulsar, kontrollü frekans ve genlikteki yüksek gerilim darbeleri üretecek yeryüzünden yukarı doğru başlayacak olan korona deşarjlarının çok daha kısa sürede kendi üzerinden başlatarak yıldırımı kendisine doğru yönetir.

$\Delta T$  value of Pulsar has been determined by tests from various high voltage laboratories in 5 countries.

With certificates such as LCIE, BSI, SOULE, BAZET and WHVRI, Pulsar has a  $\Delta T$  value of 155 microseconds. Pulsar collects its energy (10~20kV/m) from the electric field present in the air during a stormy weather.

Pulsar activates only when the electric field density in the air is close to the minimum value for a lightning to strike; therefore Pulsar remains a passive rod in normal weather, without triggering lightnings.

Pulsar directs the lightning onto itself by generating high voltage pulses with controlled frequency and amplitude, thus starting the coronal discharges (that originate from the ground upwards) sooner.

**Aktif Paratoner**  
Active Lightning Conductor

Part No.	Weight (each)
EY.00.PTESLA	7,50

**NFC 17 102 standardına göre üretimi yapılan aktif paratoner başlığıdır. Havadaki elektrostatik alan değişimi prensibine dayanan çalışma sistemi sayesinde yıldırım yakalama görevi görmektedir.**

**Test edilebilme özelliğine sahiptir.**

**ICMET ve BET gibi Avrupa laboratuvarlarından alınmış test belgeleri bulunmaktadır.**

**Ayrıca rüzgar dayanım test belgesine sahip bir üründür.**

Active arresting rod produced in line with NFC 17 102 standards. Its arresting principle depends on the change in electrostatic field in the air.  
Testable on site.

Certified by European test laboratories such as ICMET and BET.

Also certified for wind resistance.

ICMET ve BET gibi Avrupa laboratuvarlarından alınmış test belgeleri bulunmaktadır.

Ayrıca rüzgar dayanım test belgesine sahip bir üründür.

Active arresting rod produced in line with NFC 17 102 standards. Its arresting principle depends on the change in electrostatic field in the air.

Testable on site.

Certified by European test laboratories such as ICMET and BET.

Also certified for wind resistance.

As well as being a more affordable solution by design, it also offers easy installation in locations such as high towers.

## Paratoner Montaj Direği Lightning Conductor Mast

Part No.	Material	Diameter	Length	Weight (each)
EY.FE.D.203	StZn	2"	3 m	16,10
EY.FE.D.206	StZn	2"	6 m	32,20
EY.FE.D.253	StZn	2 ½"	3 m	20,60
EY.FE.D.256	StZn	2 ½"	6 m	41,30
EY.FE.D.303	StZn	3"	3 m	26,80
EY.FE.D.306	StZn	3"	6 m	53,60

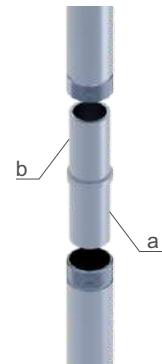

StZn: Galvanizli Çelik / Galvanized Steel

## Paratoner Direği Montaj Adaptörü Lightning Conductor Mast Adapters

Part No.	Material	Diameter (a)	Diameter (b)	Weight (each)
EY.FE.DA.20	StZn	2"	2"	1,00
EY.FE.DA.25	StZn	2 ½"	2 ½"	1,80
EY.FE.DA.30	StZn	3"	3"	2,30
EY.FE.DA.2520	StZn	2 ½"	2"	2,40
EY.FE.DA.3020	StZn	3"	2"	3,00
EY.FE.DA.3025	StZn	3"	2 ½"	2,60

StZn: Galvanizli Çelik / Galvanized Steel

## Paratoner Direği Montaj Tabanı Lightning Conductor Mast Base

Part No.	Material	Diameter	Hole Diameter	Weight (each)
EY.FD.DTD.20	StZn	2"	10.0 mm	0,25
EY.FD.DTD.25	StZn	2 ½"	10.0 mm	0,30
EY.FD.DTD.30	StZn	3"	10.0 mm	0,35

StZn: Galvanizli Çelik / Hot Dip Galvanized Steel

**Paratoner Direği Montaj Tabanı (Orta Tip)**  
**Lightning Conductor Mast Base (Type Middle)**

Part No.	Material	Diameter	Hole Diameter	Weight (each)
EY.FD.DTM.20	StZn	2"	13x25 mm	4,50
EY.FD.DTM.25	StZn	2 1/2"	13x25 mm	4,90
EY.FD.DTM.30	StZn	3"	13x25 mm	5,40

StZn: Galvanizli Çelik / Hot Dip Galvanized Steel  
 Anahtar Ölçüsü / Spanner 17 mm

**Paratoner Tespit Kelepçesi**  
**Lightning Conductor Clamp**

Part No.	Material	Diameter	Mounting Diameter	Weight (each)
EY.FD.DTP2016	StZn	2"	16.0 mm	0,72
EY.FD.DTP2516	StZn	2 1/2"	16.0 mm	0,76
EY.FD.DTP3016	StZn	3"	16.0 mm	0,80
EY.FD.DTP2020	StZn	2"	20.0 mm	0,72
EY.FD.DTP2520	StZn	2 1/2"	20.0 mm	0,76
EY.FD.DTP3020	StZn	3"	20.0 mm	0,80

StZn: Galvanizli Çelik / Hot Dip Galvanized Steel  
 Anahtar Ölçüsü / Spanner 17 mm

**Paratoner Tespit Adaptörü**  
**Lightning Conductor Adapter**

Part No.	Material	Diameter (a)	Diameter (b)	Weight (each)
EY.FE.DPA.20	StZn	2"	30.0 mm	2,25
EY.FE.DPA.25	StZn	2 1/2"	30.0 mm	3,35
EY.FE.DPA.30	StZn	3"	30.0 mm	4,60

StZn: Galvanizli Çelik / Galvanized Steel  
 Sadece Franklin ve Pulsar Serisi Paratonerlerin Direğe Montajında Kullanılır.  
 Used only for pole installation of Franklin Frank and Pulsar lightning arresters.

## Paratoner Direği Gerdirme Kelepçesi Stretch Wire Clip

Part No.	Material	Diameter	Weight (each)
EY.FD.DKG.20	StZn	2"	0,49
EY.FD.DKG.25	StZn	2 ½"	0,52
EY.FD.DKG.30	StZn	3"	0,55

StZn: Galvanizli Çelik / Hot Dip Galvanized Steel  
Anahtar Ölçüsü / Spanner 13 mm

## Gergi Teli Tabanı Stretch Wire Fixing Foot

Part No.	Material	Hole Diameter	Weight (each)
EY.FD.DGT.3	StZn	10.0 mm	0,9

StZn: Galvanizli Çelik / Hot Dip Galvanized Steel

Metalwork Clamp

Part No.	Material	Conductor Diameter	Screw Size	Screw Diameter	Weight (each)
EY.P.İKP.250	CuPbZn	2x50mm <sup>2</sup>	M.8x25	M.10x30	0,40
EY.A.İKP.250	Al	2x50mm <sup>2</sup>	M.8x25	M.10x30	0,15

CuPbZn: Pirinç / Brass  
Al: Alüminyum / Aluminium  
Anahtar Ölçüsü / Spanner 13 mm, 17 mm  
Civata / Screw: Paslanmaz / Stainless

**İniş Ek Klemensi**  
Jointing Clamp

Part No.	Material	Conductor Diameter	Screw Diameter	Weight (each)
EY.P.İKE.250	CuPbZn	2x50mm <sup>2</sup>	M.8x30	0,18
EY.A.İKE.250	Al	2x50mm <sup>2</sup>	M.8x30	0,08

CuPbZn: Pirinç / Brass  
Al: Alüminyum / Aluminium  
Anahtar Ölçüsü / Spanner 13 mm  
Civata / Screw: Paslanmaz / Stainless

## Platform İniş Klemensi Metalwork Clamp

Part No.	Material	Conductor Diameter	Screw Size	Screw Diameter	Weight (each)
EY.FD.İKP150.620E	StZn	1x50mm <sup>2</sup>	M.8x30	M.6x20	0,13
EY.FDC.İKP150.620E	Cu	1x50mm <sup>2</sup>	M.8x30	M.6x20	0,13
EY.FDC.İKP170.620E	Cu	1x70mm <sup>2</sup>	M.8x30	M.6x20	0,14
EY.FDC.İKP195.620E	Cu	1x95mm <sup>2</sup>	M.8x30	M.6x20	0,14
EY.FDC.İKP1120.620E	Cu	1x120mm <sup>2</sup>	M.8x30	M.6x20	0,15
EY.FDA.İKP150.620E	Al	1x50mm <sup>2</sup>	M.8x30	M.6x20	0,12

StZn: Galvanizli Çelik / Galvanized Steel

Cu: Bakır / Copper

Al: Alüminyum / Aluminium

Anahtar Ölçüsü / Spanner 13 mm, 10 mm

Ürün Kodu sonunda belirtilen "E" (Elektrogalvaniz) Civata Özelliğini belirler.

"E" (electrogalvanized) suffixes denote bolt properties.

## Platform İniş Klemensi Metalwork Clamp
